Himaayah Schools

Ages 5–8

HIMAAYAH CHILDREN'S LEARNING SERIES

Little Minds, BIG Questions

Think. **Explore.** **Discover.** **Understand.**

A children's intellectual development guide and activity workbook

66 activities in eight parts · a parent and facilitator handbook · a 12-week learning pathway · a progress journal

Welcome, little explorer!

This is **your** book. Inside it you will look closely at leaves and ants, build towers, solve puzzles, tell stories, mix colours, count money at a pretend market, cook a fruit salad and discover the signs of Allah all around you.

There are no silly questions in this book. Every big thinker started with a small question. So ask, wonder, try, and have fun!

All about me	
This book belongs to	
I am ____ years old	
My favourite thing to learn about	
A question I would love to answer	

Draw something you love to look at: a tree, the sky at night, your favourite animal...

Dear parents and teachers

Children are born curious. A four-year-old can ask more than a hundred questions in a day. Little Minds, Big Questions is a practical workbook that helps you keep that curiosity alive and turn it into real thinking: observing carefully, reasoning, reading, speaking, creating, working with numbers, managing everyday tasks and reflecting on the signs of Allah.

Our core idea

We do not only want children who can memorise information and repeat answers. We want children who ask meaningful questions, observe carefully, investigate ideas, connect what they learn, explain their thinking and keep a lasting love of learning.

This book **does not replace** school, homeschooling or Islamic education. It sits beside them. Most activities take 20 to 30 minutes and use things you already have at home: bottle caps, beans, cups, old newspapers, a bowl of water, a walk outside.

You do not need to be a trained teacher. Each activity tells you what to prepare, what to say and how to help without giving the answer away. The **Parent and Facilitator Handbook** on the next pages is the most important part of the book: please read it before you begin.

Above all, **this is not a test.** The aim is development, curiosity and confidence, not marks or performance. A child who asks one good question has had a good day.

Jazākumullāhu khayran for investing in your child's mind.
Himaayah Schools

How to use this book

Ages and stages

The book is written mainly for children aged **5 to 8**. Younger children can join in with your help, and older children can try the optional challenges. Adapt every activity to your own child: children of the same age are not all ready for the same things.

Age	How to use the activities	Tips
4–5	Parent-led, spoken, visual and play-based.	Short instructions, pictures, movement and hands-on exploring. Let the child answer by talking or pointing.
5–6	Guided activities with drawing, talking and simple writing.	Accept spoken answers when writing is still hard. You can write what the child says.
7–8	More independent reading, reasoning, recording and projects.	Use the multi-step tasks and the open-ended questions.
9–10	Optional stretch: the “Challenge yourself” boxes, research and longer projects.	Extension tasks are never compulsory.

Inside every activity

Every activity follows the same ten steps, so you and your child always know what comes next.

Part	What it is for
Activity title	A short, inviting name.
Learning objective	The skill or idea the activity grows.
What you need	Simple, safe, affordable materials.
▶️ Let’s begin	Clear steps for the child, read aloud by you if needed.
? Think about it	Open questions to talk about. Many have more than one good answer.
✎ Try it yourself	A practical challenge to do alone or together.
★ Tell me what you discovered	The child explains by talking, drawing, writing or showing.
Parent’s corner	How to guide, prompt and extend, without giving answers away.
What we learnt	A short recap to say together.
Challenge yourself	An optional extension for children ready for more.

Features you will meet again and again

Feature	What it is
Question of the Day	Six short, thought-provoking questions at the start of each part, for car rides, mealtimes and bedtime.
Reading Corner	Original short stories with questions, new words and things to talk about.
The Little Researcher	Small research tasks: finding out from books, family members and safe resources.
Weekend Project	Bigger hands-on projects: a garden, a paper bridge, a miniature town, a family budget.
Speaking Challenge	Weekly practice in storytelling, describing, explaining and presenting.
Reflection Journal	A page at the end of each part: what I learnt, what surprised me, a question I still have, and what I am grateful to Allah for.

Your explorer's kit

Keep these in a box or bag so that learning time can start quickly. You will not need everything at once.

For writing and art	For exploring	From the kitchen and recycling
Pencils, crayons, markers Paper and an exercise book Child-safe scissors and glue Old magazines and newspapers	A magnifying glass (if you have one) A ruler, a tape measure or string A clock or watch A torch	Beans, rice, bottle caps Cups, bowls and spoons Empty bottles, boxes and cartons Cotton wool, foil, straws

Contents

01 **Parent and Facilitator Handbook**
Read this first

02 **The 12-week learning pathway**
A suggested plan: four sessions a week

03 **Part 1: The Curious Observer**
Curiosity, observation and scientific thinking

04 **Part 2: The Little Thinker**
Reasoning, critical thinking and problem-solving

05 **Part 3: The Knowledge Explorer**
Reading, understanding and knowing about the world

06 **Part 4: The Confident Communicator**
Speaking, listening and explaining

07 **Part 5: The Creative Mind**
Imagination, art and inventing

08 **Part 6: The Little Mathematician**
Numbers, shapes, measuring, time and money

09 **Part 7: The Independent Child**
Everyday skills, safety and teamwork

10 **Part 8: Signs of Allah**
Reflection, gratitude and good character

11 **My progress journal**
Skills, checkpoints and my activity record

12 **Answers and notes for parents**

13 **Certificate**

FOR PARENTS AND FACILITATORS

The Parent and Facilitator Handbook

This handbook equips you to guide the activities confidently and gently, even if you have never taught before. Read it once before you start, and come back to it whenever you need ideas.

The guiding principle

Do not treat any activity as a test. The goal is development, curiosity and confidence, not performance for its own sake. Compare your child only with their own earlier self.

A note on safety

Activities with water, heat, sharp tools, food or going outside have a red **Safety first** box. Read it before you start, and always supervise. Never leave a young child alone near water, fire, roads or electrical sockets.

1. Every child is different

Children grow at different speeds in different areas. One six-year-old reads fluently but finds it hard to sit still; another builds amazing towers but is shy to speak. Use the activities as a menu, not a race.

If the activity is too hard…	If the activity is too easy…
Do it together and model it first. Accept spoken or drawn answers. Break it into smaller steps. Use real objects instead of pictures.	Ask “Why?” and “How do you know?” Try the Challenge yourself box. Ask the child to teach it to someone else. Change one thing and predict what happens.

2. Grow curiosity without overwhelming

- Keep sessions short: **20 to 30 minutes** is plenty for most children aged 5 to 8.
- Stop while your child is still enjoying it. Leave them wanting more.
- Do not fill every hour with lessons. Free play, rest and boredom also grow creativity.
- Follow your child’s interests. If they are fascinated by ants, spend a week on ants.
- Choose a regular time, such as after ʿAṣr or after breakfast on Saturdays, so learning becomes a habit.

3. Ask open-ended questions

A closed question has one short answer (“What colour is it?”). An open question invites thinking (“What do you notice about it?”). Keep these questions handy:

To start thinking	To deepen thinking	To extend thinking
What do you notice? What do you wonder about? What does it remind you of?	Why do you think so? How do you know? What else could it be?	What would happen if…? How could we find out? How could we do it differently?

4. Help your child reason, instead of giving answers

1. **Wait.** After you ask, count silently to five, even ten. Thinking takes time.
2. **Ask what they have tried.** "What did you do first? What happened?"
3. **Give the smallest hint that helps.** "Look at the first two shapes again."
4. **Let them be wrong for a while.** Testing a wrong idea is real science.
5. **Ask them to explain the answer** once they find it: "How did you work it out?"

5. Encourage shy children gently

- Never compare a child with brothers, sisters or friends.
- Let them draw or whisper an answer to you first, then share it.
- Start with a small, friendly audience: a parent, a toy, a younger sibling.
- Praise effort and courage: "That was brave to try."
- Give them a role: holding the pictures, timing the game, asking the first question.

6. Correct mistakes without discouraging

Mistakes are part of learning, not a sign of failure. Try "Interesting! How did you get that?" before "No, that's wrong." Often the child finds the mistake while explaining.

The Prophetic way

The Prophet ﷺ said: "Allah is gentle and loves gentleness in all matters" (al-Bukhārī 6927, Muslim 2593). He taught with patience: he asked questions, waited for answers and praised good effort. Correct gently, in private, and always leave the child's dignity intact.

7. Build a reading culture at home

- Read aloud **every day**, even for ten minutes, even after your child can read alone.
- Let your child see **you** reading: books, the Qur'an, newspapers.
- Make a small reading corner with a mat, a cushion and a basket of books.
- Swap books with other families, visit a library, and let your child choose some books themselves.
- Use the reading tracker in Activity 3.8.

8. Use everyday life as a classroom

Where	Learning you can do there
The market	Counting, comparing prices, giving change, naming foods, asking where things come from.
The kitchen	Measuring, following steps, changes when food is heated or cooled, sharing fairly.
The car or bus	Counting cars of one colour, reading signs, “I spy”, guessing how long a journey will take.
The compound or garden	Insects, plants, shadows, weather, building and digging.
Ṣalāh and the masjid	Telling the time, the days of the week, cleanliness, good manners, gratitude.

9. Screens, phones and learning

- Most activities in this book need **no phone or internet**. That is on purpose.
- The World Health Organization advises no more than **one hour** of sitting screen time a day for children aged 3 to 4, and less is better. For older children, agree clear and consistent limits.
- When you do use a screen, watch together and talk about it. Choose slow, calm, educational content over fast cartoons and endless short videos.
- Keep screens out of bedrooms and away from mealtimes and the hour before sleep.
- Preview apps and videos, and turn off autoplay.

10. Track progress without turning it into an exam

Watch, listen and note what you see. The progress journal at the back uses three simple stages for each skill:

Beginning	Developing	Confident
Needs a lot of help. Tries with support.	Does it with some help or reminders.	Does it alone, and can explain or teach it.

- Fill it in at weeks 4, 8 and 12, not after every activity.
- Keep a folder of your child’s best drawings and projects. Celebrate growth: “Remember when this was hard? Look at you now!”

PLAN

The 12-week learning pathway

You can use this book in any order. If you like a routine, try this plan: **four short sessions a week**, with reading and free exploring every day. In weeks 5 to 8, each session pairs two shorter activities; split them across two days if your child prefers.

Week	Focus	Session 1	Session 2	Session 3	Session 4	Weekend and extra
1	Observation	1.1	1.2	1.3 (start your seeds)	1.4	Weekend Project: a little garden
2	Curiosity	1.5	1.6	1.7	1.8	Reflection Journal, Part 1
3	Logic	2.1	2.2	2.3	2.4	Questions of the Day, Part 2
4	Problem-solving	2.5	2.6	2.7	2.8	Weekend Project: paper bridge · Progress check 1
5	Reading and speaking	3.1 + 4.1	3.2 + 4.2	3.3 + 4.3	3.4 + 4.4	Reading Corner
6	Reading and speaking	3.5 + 4.5	3.6 + 4.6	3.7 + 4.7	3.8 + 4.8	Speaking Challenges
7	Creativity and maths	5.1 + 6.1	5.2 + 6.2	5.3 + 6.3	5.4 + 6.4	Reflection Journal, Parts 5 and 6
8	Creativity and maths	5.5 + 6.5	5.6 + 6.6	5.7 + 6.7	5.8 + 6.8	Weekend Project: miniature town · Progress check 2
9	Everyday skills	7.1	7.2	7.3	7.4	Weekend Project: family picnic budget
10	Everyday skills	7.5	7.6	7.7	7.8 + 7.9	The Little Researcher: water
11	Signs of Allah	8.1	8.2	8.3 (start your seeds)	8.4 + 8.5	Reading Corner: the date palm
12	Signs of Allah and projects	8.6	8.7	8.8	8.9	My Big Question Book · Progress check 3 · Certificate

Every day, alongside the plan

- 15 minutes of reading together (see Activity 3.8).
- One Question of the Day at a meal or in the car.
- Something to notice outside: the sky, a plant, an insect, the weather.
- A short duʿāʾ: “Rabbi zidnī ʿilmā”, My Lord, increase me in knowledge (Ṭā Hā 20:114).

PART 1

The Curious Observer

In this part you will explore

1. Learning to observe details
2. Asking why, how and what-if questions
3. Plants, animals and the natural world
4. Simple home experiments
5. Making predictions and testing them
6. Cause and effect
7. Recording discoveries
8. Exploring the local environment

BIG QUESTION

Why do leaves fall, and where do they go?

Activities 1.1 to 1.8 · talk about the big question together before you begin

The Curious Observer

Scientists are people who **look closely, ask questions and test their ideas**. You can do all three, starting today, right where you live.

In this part you will become a super spotter, grow a seed, watch animals, test what sinks and floats, find out what makes ice melt, keep a weather notebook and go on an explorer walk.

Question of the Day

Pick one at breakfast, in the car or at bedtime. There are no wrong answers. Ask “Why do you think so?”

- Why do you think leaves are green?
- Where do ants go when it rains?
- What would happen if it never got dark at night?
- Why do you think birds build nests up high?
- What is the smallest living thing you have ever seen?
- If you could ask a tree one question, what would you ask?

Activity 1.1

Super Spotter

Ages 5–8 ⏱ About 20 minutes

Learning objective: Notice details using all the safe senses, and describe them in words.

What you need: A leaf, a fruit (such as an orange or a guava) and a stone; a magnifying glass if you have one; crayons.

▶ Let's begin

1. Put the leaf, the fruit and the stone on a table.
2. Choose **one**. Look at it slowly, for one whole minute. Turn it over and look underneath.
3. Use your senses: How does it **look**? How does it **feel**? Does it have a **smell**? Does it make a **sound** when you tap it?
4. Say three things you notice. Then try to find three more!

? Think about it

- What did you notice that you did not see at first?
- Which sense helped you the most? Why?
- How is the leaf different from the stone? How are they the same?

✎ Try it yourself

Play **Spot the Change**: a grown-up places five objects on a tray. Look for 30 seconds, then close your eyes. The grown-up moves or removes one object. What changed?

★ Tell me what you discovered

Draw your object as carefully as you can, big. Add arrows and labels for the details you noticed, like "bumpy", "shiny" or "veins".

My object, drawn very carefully

Parent's corner

Resist naming things for your child. Ask “What else do you notice?” several times; the best details often come on the third or fourth look.

Give new words as they need them: rough, smooth, veins, wrinkled, speckled.

What we learnt: Good scientists look slowly and carefully, use their senses and notice small details.

Challenge yourself · extension, ages 9–10 (optional)

Look at the same leaf every day for a week. Draw it each time. How does it change as it dries?

• • •

Activity
1.2

Why, How and What If?

Ages 5–8 ⏱️ About 20 minutes

Learning objective: Ask different kinds of questions about the world, and sort them.

What you need: Small pieces of paper, a jar or box, a pencil.

▶️ Let's begin

1. Look at the question flower. Each petal is a way to start a question.
2. Look around the room or out of the window. Choose something interesting: a fan, a cloud, a lizard, a cooking pot.
3. Make a question with each petal. For example: “**Why** does the fan go round?” “**How** does it work?” “**What if** it went backwards?”
4. Your grown-up writes each question on paper and puts it in your **Question Jar**.

? Think about it

- Which question is the hardest to answer? Why?
- Which questions could you answer by looking? Which need you to ask someone or read a book?
- Is there a question nobody in your family can answer?

✎ Try it yourself

Ask **five "what if" questions** about your home. What if the roof was made of glass? What if water flowed upwards? Choose your favourite and talk about the answer together.

★ Tell me what you discovered

Choose one question from your jar. How could you find the answer: look, try it, ask someone or read? Write or say your plan.

Parent's corner

Praise good questions as much as good answers: "That's a great question! How could we find out?"

Once a week, pull one question out of the jar and investigate it together. It is fine to say "I don't know, let's find out."

What we learnt: Questions start with who, what, where, when, why and how. "What if?" questions help us imagine and investigate.

Challenge yourself · extension, ages 9–10 (optional)

Sort your questions into three groups: "I can find out by looking", "I can find out by testing" and "I need to ask or read".

Activity 1.3

A Seed's Big Journey

Ages 5–8 ⏱️ 10 minutes to start, then 5 minutes a day for 2 weeks

Learning objective: Watch a seed grow, record changes over time and learn what plants need.

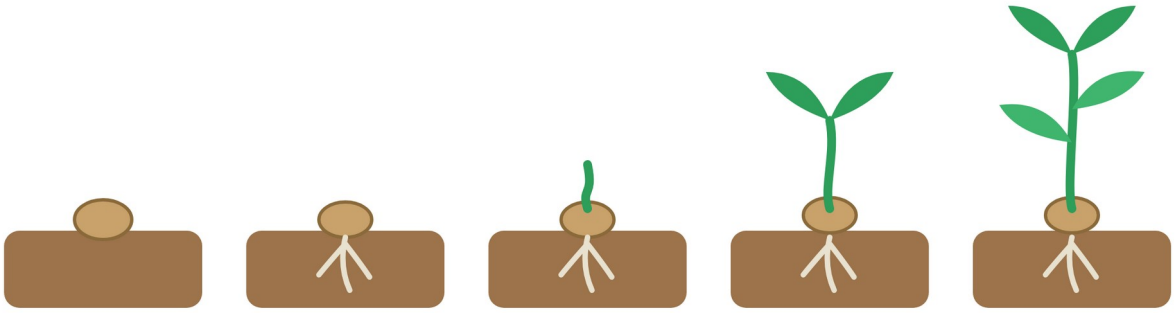

What you need: Three or four dry beans (brown or white beans from the kitchen), a clear cup or jar, cotton wool or tissue, water.

Safety first

Wash your hands after handling seeds and soil. Do not eat seeds that have been soaking for days.

▶️ Let's begin

1. Fill the cup with damp (not dripping) cotton wool.
2. Push the beans down between the cotton and the side of the cup, so you can see them through it.
3. Put the cup somewhere bright but not in strong sun. Keep the cotton damp.
4. Look at your beans every day. What changes?

? Think about it

- What do you think the bean needs to grow? How could we test it?
- Which grows first: the root or the shoot? Why might that be?
- Which way does the root grow? Which way does the shoot grow?

✎ Try it yourself

Start a **second cup without water** at the same time. Predict: what will happen? Compare the two cups after five days.

Day 1	Day 5	Day 10

★ Tell me what you discovered

Draw your bean in the boxes above on days 1, 5 and 10. Then tell your grown-up the story of your bean, from seed to plant.

Parent's corner

This is a slow experiment, which is part of the lesson: patience and daily checking. A quick look each morning is enough.

The cup without water is a “fair test”: only one thing is different. Use those words with your child.

What we learnt: Seeds need water and warmth to start growing. The root grows first, downwards; the shoot grows upwards towards the light.

Challenge yourself · extension, ages 9–10 (optional)

Measure your shoot every two days with a strip of paper and stick the strips in a row. You have made a growth chart!

Activity 1.4

Animal Detectives

Ages 5–8 ⏱ About 25 minutes

Learning objective: Observe animals closely and record how they move, eat and live.

What you need: A notebook, a pencil, patience! Somewhere to watch: the compound, a garden, a window.

Safety first

Watch animals; do not touch or chase them. Never touch snakes, scorpions, stray dogs or dead animals. Stay with an adult outside.

▶ Let's begin

1. Go outside with your grown-up. Stand or sit very still for five minutes.
2. Look for animals: ants, lizards, birds, chickens, goats, butterflies, snails.
3. Choose one. Watch it carefully. How does it move? What is it doing? Where does it go?
4. Fill in the detective table below.

? Think about it

- Why do you think the lizard nods its head?
- Why might ants walk in a line?
- Which animal was the hardest to watch? Why?

✎ Try it yourself

Fill in the table for two animals.

Detective question	Animal 1: _____	Animal 2: _____
How does it move?		
What does it eat?		
Where does it live or rest?		
How many legs?		
Something surprising		

★ Tell me what you discovered

Act out your animal for your family without speaking. Can they guess it? Then explain one thing you learnt about it.

Parent's corner

Ask “How do you know?” when your child makes a claim: “It’s hungry.” “How do you know?” This is the start of using evidence.

Agama lizards, ants, chickens and birds are perfect, easy-to-find subjects in most Nigerian homes.

What we learnt: Animals move, eat and live in different ways. Detectives look patiently and record what they see.

Challenge yourself · extension, ages 9–10 (optional)

Put a tiny piece of bread, a little sugar and a piece of leaf near an ant line. Which do the ants choose first? Record what happens after 10 minutes.

Activity 1.5

Sink or Float?

Ages 5–8 ⏱ About 25 minutes

Learning objective: Make predictions, test them and compare the results.

What you need: A big bowl of water, and objects such as a spoon, a bottle cap, a stone, a leaf, a pencil, a coin, an orange, a piece of foil, a plastic toy.

Safety first

An adult must stay with you near water at all times. Wipe up spills so nobody slips.

▶ Let's begin

1. Put the objects in a line next to the bowl.
2. Before you test each one, **predict**: will it sink or float? Mark your guess in the table.
3. Gently put it in the water. Watch.
4. Mark what really happened.

? Think about it

- Were any results surprising? Which ones?
- Do big things always sink? Do small things always float?
- Why do you think a huge ship floats?

✎ Try it yourself

Fill in the table, then try the foil challenge below.

Object	My prediction (sink or float)	What happened	Was I right?

★ Tell me what you discovered

Foil challenge: squash a piece of foil into a tight ball. Does it sink? Now shape the same foil into a little boat. Does it float? How many beans can your boat carry before it sinks? Tell what you discovered.

Parent's corner

A wrong prediction is a success, not a failure: it means your child tested an idea. Say “What a surprise! Why do you think that happened?”

The orange is fun: try it with and without its peel (with peel it floats, peeled it often sinks, because the peel is full of tiny air pockets).

What we learnt: We predict first, then test. Whether something floats depends on its shape and what it is made of, not just its size.

Challenge yourself · extension, ages 9–10 (optional)

Can you make a stone float? (Hint: put it in your foil boat or a plastic lid.)

• • •

Activity 1.6

What Makes Ice Melt?

Ages 5–8 ⏱️ 10 minutes to start, then checks every 10 minutes

Learning objective: Understand cause and effect by changing one thing at a time.

What you need: Three ice cubes of the same size, three small plates, a cloth, a clock or watch.

▶️ Let's begin

1. Put one ice cube on each plate.
2. Plate A goes in the **sun**. Plate B goes in the **shade**. Plate C goes in the shade, **covered with the cloth**.
3. Predict: which will melt first? Which will melt last?
4. Check every 10 minutes and write down what you see.

? Think about it

- What caused the first ice cube to melt fastest?
- Did the cloth keep the ice cold or make it warm? Why?
- Where else do we use this idea at home? (Think about cool boxes and fridges.)

✎ Try it yourself

Record your results.

Time	A: Sun	B: Shade	C: Shade with cloth
Start	Whole	Whole	Whole
10 minutes			
20 minutes			
30 minutes			
Melted at			

★ Tell me what you discovered

Finish this sentence: “The ice in the sun melted faster **because** …” Explain it to someone in your family.

Parent's corner

Use the words **cause** (what makes something happen) and **effect** (what happens). “The sun’s heat was the cause. Melting was the effect.”

Point out that we kept everything else the same (same size cubes, same plates). That is what makes it a fair test.

What we learnt: A cause makes something happen; the effect is what happens. Heat causes ice to melt. Covering it slows the heat down.

Challenge yourself · extension, ages 9–10 (optional)

Try salt: sprinkle a little salt on one ice cube and none on another, both in the shade. Which melts faster? Ask an adult why roads in cold countries are salted.

Activity
1.7

My Weather Notebook

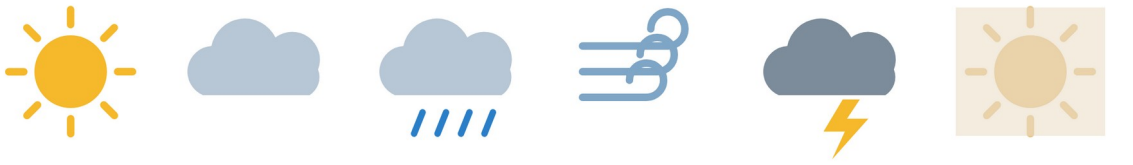

Ages 5–8 ⏱️ 5 minutes a day for one week

Learning objective: Record observations every day and look for patterns.

What you need: Your exercise book or the table below, crayons.

▶️ Let's begin

1. Each day at the same time, go outside or look out of the window.
2. Look at the sky. Feel the air. Is it hot or cool? Is there wind?
3. Draw the weather symbol for the day in the table.
4. At the end of the week, count: how many sunny days? How many rainy days?

Sunny | Cloudy | Rainy | Windy | Stormy | Hazy (harmattan)

? Think about it

- Is the weather in the morning the same as in the afternoon?
- What clues tell you rain is coming?
- How does the weather change what we wear and do?

✎ Try it yourself

Fill in your weather table for one week.

Day	Weather symbol	Hot, warm or cool?	Windy?
Monday			
Tuesday			
Wednesday			
Thursday			
Friday			
Saturday			
Sunday			

★ Tell me what you discovered

Be the weather reporter! Stand up and give a 30-second weather report for today, like on the news: “Good evening. Today in our town it was…”

Parent's corner

Talk about Nigeria’s seasons: the **rainy season** and the **dry season**, with the dusty, hazy **harmattan** wind from the Sahara around December to February.

Doing it at the same time each day matters. Linking it to a daily routine, such as after Fajr or after school, helps.

What we learnt: Scientists record what they see every day. Over time, records show patterns, like seasons.

Challenge yourself · extension, ages 9–10 (optional)

Make a simple rain gauge: a straight-sided clear bottle with a ruler line drawn on it, left open outside. Measure the rain after each storm.

Activity 1.8

Explorer Walk

Ages 5–8 ⏱ About 30 minutes

Learning objective: Explore the local environment and record it as a simple map.

What you need: A grown-up, a clipboard or book to lean on, paper, a pencil.

Safety first

Always walk with an adult. Stay away from roads, open gutters and building sites. Do not pick or eat unknown plants or berries.

▶ Let's begin

1. Walk slowly around your compound, street or a park with your grown-up.
2. Stop three times. Each time, close your eyes for 20 seconds and **listen**. What can you hear?
3. Look for: something tall, something tiny, something old, something new, something living, something made by people.
4. Back home, draw a map of your walk with the things you found.

? Think about it

- What did you hear that you usually do not notice?
- Which things were made by Allah, and which by people?
- How could you make your street cleaner or greener?

✎ Try it yourself

Tick what you found on your walk: ☐ a tall tree ☐ an insect ☐ a bird ☐ a flower ☐ something made of metal ☐ something made of wood ☐ a sign with writing ☐ something you have never noticed before

★ Tell me what you discovered

Draw a map of your walk. Mark your house, the path you took and the special things you found. Then take a family member on a “tour” using your map.

My explorer map

Parent's corner

Maps can be very simple: boxes for buildings, lines for paths, small pictures for trees. Praise your child for including details.

Ask “How would someone use your map to find the mango tree?” This builds spatial language: next to, behind, opposite, at the end of.

What we learnt: Explorers notice their surroundings with all their senses, and maps help us show where things are.

Challenge yourself · extension, ages 9–10 (optional)

Add a key (legend) to your map: a symbol for trees, one for houses and one for shops, explained in a box in the corner.

WEEKEND PROJECT

Plant a little garden

Grow something you can eat! Many vegetables grow well in Nigeria, even in a small space: **ugwu (fluted pumpkin), tomatoes, peppers, spinach (green) or okra.**

Safety first

Use gloves or wash hands well after touching soil. An adult should handle any tools and keep young children away from fertilisers and insect sprays.

What you need

A small patch of soil, or old buckets, tins or cut plastic bottles with holes in the bottom; soil; seeds; water; a small sign.

Let's begin

1. Choose a place that gets morning sun.
2. Fill your containers with soil. Make a hole as deep as your finger's first joint.
3. Drop in two or three seeds, cover them gently and water.
4. Make a sign with the plant's name and the date.
5. Water a little each day, in the morning or evening, not in the hot afternoon.

My garden diary

Date	What I did	What I noticed

Did you know?

The Prophet ﷺ said that when a Muslim plants a tree or sows a seed and a bird, a person or an animal eats from it, it is counted as charity for them (al-Bukhārī 2320, Muslim 1553).

REFLECTION JOURNAL

Looking back at Part 1

Something new I learnt

Something I found interesting

A question I still have

Something I want to investigate

Something I am grateful to Allah for

Draw your favourite moment from this part

PART 2

The Little Thinker

In this part you will explore

1. Patterns and sequences
2. Sorting and classification
3. Logic puzzles and riddles
4. Similarities and differences
5. Everyday problem-solving
6. Cause-and-effect reasoning
7. Making decisions
8. Explaining answers and flexible thinking

BIG QUESTION

How many different ways can you sort your shoes?

Activities 2.1 to 2.8 · talk about the big question together before you begin

The Little Thinker

Thinking is a skill, and skills grow with practice. In this part you will spot patterns, sort things, solve riddles, compare, solve problems, work out causes, make choices and explain things in new ways.

There is often more than one good answer. The best thinkers say **"Why do you think so?"** and **"What else could it be?"**

Question of the Day

Pick one at breakfast, in the car or at bedtime. There are no wrong answers. Ask "Why do you think so?"

- Which is more useful, a spoon or a fork? Why?
- What is the odd one out: a cat, a goat, a chair, a hen? Why?
- If you could solve one problem in your town, which would it be?
- What would happen if all the clocks stopped?
- Is it better to be strong or clever? Can you be both?
- What is the best way to share one mango between three children?

Activity 2.1

Pattern Detectives

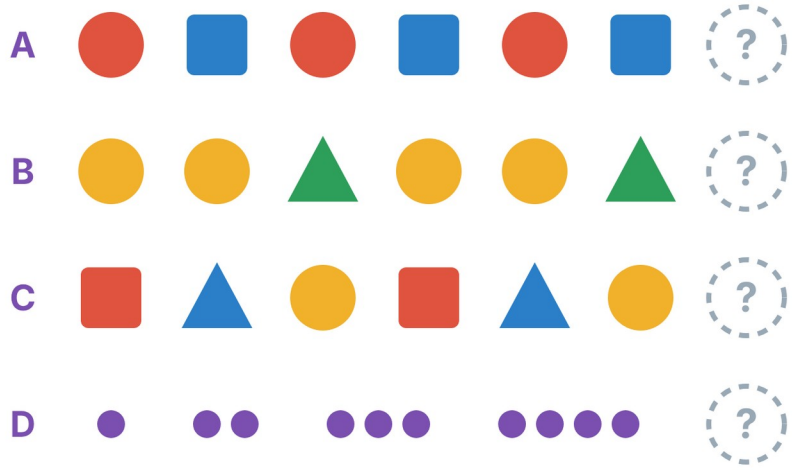

Ages 5–8 ⏱ About 20 minutes

Learning objective: Find the rule in a pattern and use it to say what comes next.

What you need: Coloured pencils or crayons, buttons or bottle tops in two or three colours.

▶ Let's begin

1. Look at the patterns below. Each row follows a rule.
2. Say the pattern out loud with a rhythm: “red circle, blue square, red circle, blue square…”
3. Work out the rule. Then draw or say what comes next in the empty circle.
4. Check by saying the whole row again from the start.

? Think about it

- How did you find the rule? What did you look for first?
- Which row was the hardest? Why?
- Can a pattern go on for ever? How do you know?

✎ Try it yourself

Make your own patterns with buttons or bottle tops: one with two colours (AB AB), one with three (ABC ABC), and one that grows (1, 2, 3…). Ask your grown-up to say what comes next.

★ Tell me what you discovered

Draw your best pattern here, and leave a space at the end for someone to complete.

My pattern

Parent's corner

Patterns are the foundation of maths and reading. Say patterns with rhythm and clapping; many children find it easier to hear than to see.

If your child is stuck, point to one pair at a time: “What comes after the circle?”

What we learnt: A pattern follows a rule that repeats or grows. Once we know the rule, we can say what comes next.

Challenge yourself · extension, ages 9–10 (optional)

Make a pattern with two rules at once, such as colour and size (big red, small blue, big red…). Can someone else find both rules?

• • •

Activity 2.2

Sort It Out

Ages 5–8 ⏱️ About 20 minutes

Learning objective: Group things by a rule, then find a different rule for the same things.

What you need: About 15 household objects: spoons, bottle tops, buttons, coins, pegs, leaves, small toys, socks; two bowls or mats.

▶️ Let's begin

1. Put all the objects on a mat. Look at them for a moment.
2. Choose a rule, for example “shiny” and “not shiny”. Sort the objects into two groups.
3. Ask your grown-up to guess your rule from the groups.
4. Now put them all back and sort again with a **different** rule.

? Think about it

- How many different ways could you sort the same objects?
- Did any object fit in two groups? Which one?
- Which sorting rule was the most useful for finding things again?

✎ Try it yourself

Try these sorting rules and count how many are in each group: **size** (big, small), **colour**, **material** (metal, plastic, cloth), and **use** (things we eat with, things we wear).

My rule	Group 1 (how many?)	Group 2 (how many?)

★ Tell me what you discovered

Choose the sorting rule you liked best. Explain it to your family, and tell them what you noticed when you counted.

Parent's corner

Let your child decide the rule, even if it is unusual ("things I like"). Ask them to explain it; unusual rules show creative thinking.

Sorting the laundry, the shopping and the shoes by the door are natural daily practice.

What we learnt: We can sort things in many ways: by size, colour, material or use. Sorting helps us organise our thinking and find things.

Challenge yourself · extension, ages 9–10 (optional)

Sort the objects with three groups at once. Then make a "mystery group": hide your rule and let your family guess it.

Activity 2.3

Riddle Time

Ages 5–8 ⏱ About 25 minutes

Learning objective: Use clues to work out an answer, and make up a riddle of your own.

What you need: Paper, a pencil, a family audience.

▶ Let's begin

1. Your grown-up reads each riddle slowly. Listen to **all** the clues before guessing.
2. Say your answer and tell the clue that helped you.
3. **Riddle 1:** I have a face and two hands, but no arms or legs. What am I?
4. **Riddle 2:** I have teeth but I cannot bite. What am I?
5. **Riddle 3:** I get wetter the more I dry. What am I?
6. **Riddle 4:** I have a neck but no head. What am I?

? Think about it

- Which clue helped you most?
- How did you know the answer was not a different thing?
- What makes a riddle tricky?

✎ Try it yourself

Logic puzzle. Aisha, Bilal and Zainab each have a cup: one red, one blue, one green. Aisha's cup is not red and not blue. Bilal's cup is not red. Who has which colour? Draw lines to show your thinking.

★ Tell me what you discovered

Make up your own riddle about an object in your home. Write or say three clues, starting with the hardest and ending with the easiest.

Parent's corner

Never rush to give the answer. Say "You are close; what else do the clues tell you?"

Riddles are an old, joyful part of many cultures, including Nigerian folk tales told after dark. Ask elders for riddles they know.

What we learnt: Clues help us work out answers. We cross out what cannot be true and keep what fits.

Challenge yourself · extension, ages 9–10 (optional)

Write a riddle with a number in it ("I have four legs but cannot walk…"). Try it on a friend.

• • •

Activity 2.4

Same and Different

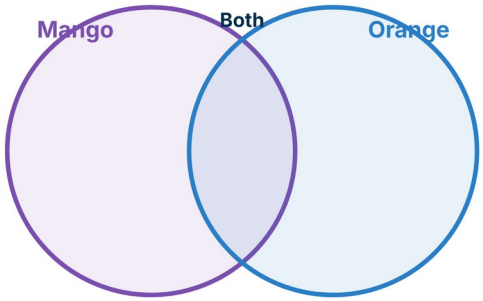

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Compare two things and say how they are alike and how they differ.

What you need: A pencil, two fruits (such as a mango and an orange), coloured pencils.

▶️ Let's begin

1. Put the two fruits side by side. Look, touch and (with permission) smell them.
2. Fill in the circles below. In the left circle, write what is true **only** of one fruit. In the right circle, what is true only of the other. In the middle, what is true of **both**.
3. Count how many things you found in each part.
4. Now play **Spot the Difference** with the two pictures. There are **six** differences. Can you find them all?

? Think about it

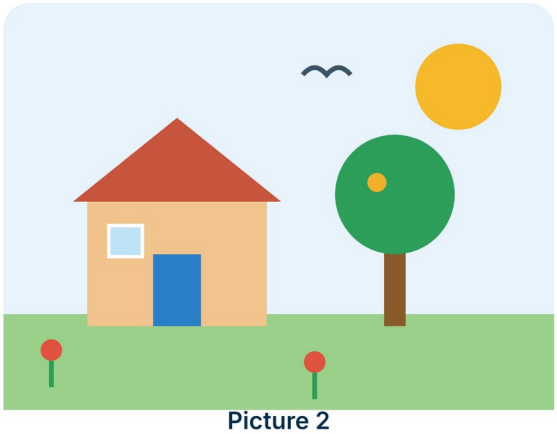

- Was it easier to find differences or things that are the same? Why?
- What is the most surprising thing you found in the middle?
- Which two other things could you compare this way?

✎ Try it yourself

Look at Picture 1 and Picture 2. Circle every difference you find on Picture 2.

Picture 1

Picture 2

★ Tell me what you discovered

Choose two animals, two vehicles or two members of your family. Tell your grown-up one way they are the same and two ways they are different.

Parent's corner

Comparing is the first step of critical thinking. Encourage “both… but…” sentences: “Both are fruit, but one is sweeter.”

The six differences are in the Answers section at the back.

What we learnt: Comparing means finding what is alike and what is different. A Venn diagram helps us see both.

Challenge yourself · extension, ages 9–10 (optional)

Compare three things at once (for example a bicycle, a car and a bus) in a table with the headings “wheels”, “carries how many”, “needs fuel”.

Activity 2.5

Tower Challenge

Ages 5–8 ⏱ About 30 minutes

Learning objective: Solve a problem in four steps: understand, plan, try and improve.

What you need: A few sheets of old newspaper, sticky tape, ten paper or plastic cups (or small boxes), a ruler.

▶ Let's begin

1. **The problem:** build the tallest tower you can using only the newspaper and tape. It must stand alone for 10 seconds.
2. **Understand it.** Say the problem in your own words. What is allowed? What is not?
3. **Plan it.** Draw your idea in the box below. What shape will be strong at the bottom?
4. **Try it.** Build your plan. If it falls, do not be upset: that is information!
5. **Improve it.** Change one thing and try again. Measure the height each time.

? Think about it

- What made your tower fall? What made it stronger?
- Why do builders use wide bases and strong shapes?
- What did you change on the second try?

✎ Try it yourself

Record your attempts.

Attempt	What I changed	Height (cm)	Did it stand?
1			
2			
3			

★ Tell me what you discovered

Draw your plan in the box. Then explain to your family what you learnt about building tall things.

My tower plan

Parent's corner

Resist fixing the tower. Offer questions only: “What do you think will happen if the bottom is wider?”

Praise the improving, not the winning: “You tried three ideas!”

What we learnt: Good problem solvers understand the problem, make a plan, try it, and improve it. A wide base makes a tower stronger.

Challenge yourself · extension, ages 9–10 (optional)

Make the tower again with a new rule: it must hold a small toy at the top. What changes?

• • •

Activity 2.6

Because... So...

Ages 5–8 ⏱ About 20 minutes

Learning objective: Connect causes to their effects using the words “because” and “so”.

What you need: Paper and a pencil, a glass of water, a spoon.

▶ Let's begin

1. Read each sentence start. Finish it in two ways: with **because** and with **so**.
2. Example: “The grass was wet **because** it rained.” “It rained, **so** the grass was wet.”
3. Try: “I put on my cap because...” “It was dark, so...” “The cup fell because...”
4. Tell your own pair of sentences to your grown-up.

? Think about it

- Which part is the cause, and which is the effect?
- Can one effect have more than one cause? Think of a muddy floor.
- Can one cause have more than one effect? Think of rain.

✎ Try it yourself

Do it: stir a spoonful of sugar into warm water. What do you see? Stir a spoonful of sand into water. What happens? Finish: “The sugar disappeared because...” and “The sand did not disappear because...”

★ Tell me what you discovered

Draw a cause-and-effect chain with three boxes and two arrows. For example: rain → mud → muddy shoes. Tell your chain as a story.

Cause → effect → effect

Parent's corner

Use “because” in everyday talk, and invite your child to do the same: “Why did we take an umbrella?”

Children often say the effect first. Gently help them find what happened before.

What we learnt: A cause makes something happen; the effect is what happens next. One thing can lead to another like links in a chain.

Challenge yourself · extension, ages 9–10 (optional)

Think of a cause chain with four links. Then think of a way to stop the chain in the middle. What would change?

• • •

Activity 2.7

Choices and Consequences

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Think about the good and bad sides of a choice before deciding.

What you need: Paper, a pencil, two cups or boxes labelled “good” and “not so good”.

▶️ Let's begin

1. Read the story: **Maryam has 200 naira. She can buy a toy she wants, save it for a school trip, or give some to a neighbour who is hungry.**
2. Fill in the table: what is good and not so good about each choice?
3. What would **you** do? Why?
4. Ask your grown-up what they would do, and why.

? Think about it

- Which choice helps other people? Which helps only Maryam?
- What might happen later because of each choice?
- When is it good to ask a wise person for advice?

✎ Try it yourself

Complete the table.

Choice	The good side	The not-so-good side
Buy the toy		
Save for the trip		
Give some away		

★ Tell me what you discovered

Think of a choice you made this week. What were your other choices? What happened? Would you choose the same way again?

Parent's corner

There is often no single “right” answer. Value the reasoning more than the choice.

You can teach that Muslims ask Allah for guidance, make duʿāʾ and seek advice from trusted, knowledgeable people before big decisions.

What we learnt: A good decision thinks about what might happen next, and about other people too. It helps to ask for advice.

Challenge yourself · extension, ages 9–10 (optional)

Make a “decision tree”: write a choice, draw two branches, and write what might happen at the end of each branch.

Activity 2.8

Many Ways to Say It

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Think flexibly: find many uses and many ways to explain.

What you need: Paper, a pencil, an old plastic bottle, a brick or a box.

▶️ Let's begin

1. Hold up an empty plastic bottle. Say how many different uses you can think of in two minutes: a vase, a pen holder, a watering can, a funnel…
2. Your grown-up counts. Try to beat your score with a box.
3. Now explain how to wash hands in **three** different ways: using words only, using pictures only, and by acting it out.
4. Which way was clearest?

? Think about it

- Which use was the most unusual?
- Why is it useful to be able to explain things in different ways?
- What does “thinking outside the box” mean?

✎ Try it yourself

List the uses.

Object	Uses I thought of	How many?
A bottle		
A box		
A spoon		

★ Tell me what you discovered

Choose one thing you know well (how to boil an egg, how to play a game). Teach it to a younger child, or to a toy, in simple words.

Parent's corner

Praise unusual ideas as well as common ones. Quantity first; quality can follow.

Explaining to someone else is the best test of understanding.

What we learnt: Flexible thinkers find many ideas and many ways to explain. Teaching is the best way to learn.

Challenge yourself · extension, ages 9–10 (optional)

Invent something new by combining two ordinary things (a spoon and a brush, for example). Draw it and name it.

• • •

WEEKEND PROJECT

Build a paper bridge

Can a flat sheet of paper hold up a pile of coins? Engineers think carefully about shape. Test it and see!

What you need

Two sheets of paper, two piles of books or boxes about 15 cm apart, some coins or small stones, a ruler.

Let's begin

1. Put the two piles of books 15 cm apart. Lay one flat sheet across the gap.
2. Predict: how many coins will it hold? Write your guess.
3. Add coins one at a time, gently, in the middle. How many before it sags?
4. Now fold the second sheet like a fan (accordion folds) and lay it across. Add coins again.
5. Count again. Which bridge is stronger? Why do you think?

Bridge	My guess	Coins it held
Flat paper		
Folded paper		

Did you know?

Folding makes paper stiffer because the folds spread out the weight. The same idea is used in corrugated cardboard and in some roofs.

REFLECTION JOURNAL

Looking back at Part 2

Something new I learnt

Something I found interesting

A question I still have

Something I want to investigate

Something I am grateful to Allah for

Draw your favourite moment from this part

PART 3

The Knowledge Explorer

In this part you will explore

1. Reading and understanding stories
2. Growing your words
3. Telling fact from opinion
4. Predicting what happens next
5. Exploring Nigeria
6. Grouping animals
7. Your first research
8. Building a reading habit

BIG QUESTION

What would you most like to find out about the world?

Activities 3.1 to 3.8 · talk about the big question together before you begin

The Knowledge Explorer

Books and questions open doors to the whole world. In this part you will read closely, learn new words, tell facts from opinions, predict, explore Nigeria, meet animals, do your own mini research and start a reading habit.

The first word revealed to the Prophet ﷺ was **"Iqra'"**: Read! Reading is a gift, and it begins with curiosity.

Question of the Day

Pick one at breakfast, in the car or at bedtime. There are no wrong answers. Ask "Why do you think so?"

- What is the best book you have ever heard or read? Why?
- If you could visit any place in Nigeria, where would you go? Why?
- What do you want to learn about before you are ten?
- Which animal would you like to learn more about?
- How do we know something is true?
- Who is the best storyteller in your family? What stories do they tell?

Activity 3.1

Story Detectives

Ages 5–8 ⏱ About 25 minutes

Learning objective: Listen to or read a short story and answer who, where, what and why questions.

What you need: This page, a pencil, and a grown-up to read aloud (or read it yourself!).

▶ Let's begin

1 **The Goat and the Gate.** Tunde had a small brown goat called Dodo. Every morning Dodo ate the leaves on the compound's wall. One day Tunde forgot to close the gate. Dodo wandered out onto the road. Tunde ran after him, calling and calling. At last Dodo stopped by the market, eating a banana leaf. Tunde tied him with a rope. From that day, Tunde always closed the gate.

2 Read it twice. The second time, point to a word you did not know.

3 Answer the questions below by speaking first, then writing one answer.

? Think about it

- **Who** is in the story? **Where** did Dodo go?
- **What** happened when the gate was left open? **Why** did it happen?
- How do you think Tunde felt? What clues helped you know?

✎ Try it yourself

Write one answer in a full sentence: "Tunde closed the gate every day after that because …"

★ Tell me what you discovered

Close the page and retell the story in your own words, with a beginning, a middle and an end.

Parent's corner

Ask your child to **retell**, not recite. Notice if they keep the order of events and use the characters' names.

Ask about feelings: "How do you know he was worried?" Inferring feelings builds comprehension.

What we learnt: Stories have characters, a place and events in an order. Good readers think about why things happen and how people feel.

Challenge yourself · extension, ages 9–10 (optional)

Write a different ending for the story. What if Dodo had met a friend on the road?

Activity 3.2

Words I Love

Ages 5–8 ⏱ About 20 minutes

Learning objective: Learn new words and use them in your own sentences.

What you need: A book you enjoy, a pencil, coloured pencils.

▶ Let's begin

1. Choose a book you like. Find **three words** you do not know, or that sound lovely.
2. Ask your grown-up what each word means, or guess from the picture and the other words.
3. Write the word, say what it means, and use it in your own sentence.
4. Draw a small picture to help you remember it.

? Think about it

- How did the picture or sentence help you work out the meaning?
- Which word was the most fun to say?
- Do any of your words have a sound like another word you know?

✎ Try it yourself

Fill in your word table.

The word	What it means	My sentence	My picture

★ Tell me what you discovered

Choose your favourite new word. Use it three times today, and tell your grown-up when you did.

Parent's corner

New words stick best when used. Use your child's new word at dinner and say "That's our word!"

Reading aloud to children introduces words they would never hear in ordinary talk.

What we learnt: New words come from reading and listening. We remember them when we use them.

Challenge yourself · extension, ages 9–10 (optional)

Find a word that means the same as “big” and another that means the opposite. How many can you find?

• • •

Activity 3.3

Fact or Opinion?

Ages 5–8 ⏱️ About 20 minutes

Learning objective: Tell the difference between something we can check (a fact) and something we feel (an opinion).

What you need: A pencil, two sticky notes or paper slips (one marked FACT, one marked OPINION).

▶️ Let's begin

1. A **fact** is something we can check and prove. An **opinion** is what someone thinks or feels.
2. Your grown-up reads each sentence. Hold up FACT or OPINION.
3. “Water is wet.” “Mangoes are the best fruit.” “A week has seven days.” “Rainy days are boring.” “Lagos is a city in Nigeria.” “Dogs are nicer than cats.”
4. Say how you could check each fact.

? Think about it

- How can we check a fact? (We can look, count, measure, ask an expert or read a trusted book.)
- Can an opinion be wrong? Can two people have different opinions and both be fine?
- Why is it important to know the difference?

✎ Try it yourself

Write one fact and one opinion about your family’s favourite food.

	My sentence
Fact	
Opinion	

★ Tell me what you discovered

Tell someone a fact and an opinion about your school or your street. Can they tell which is which?

Parent's corner

Words like “best”, “worst”, “nicest” and “boring” are clues that a sentence is an opinion.

Link to honesty: Islam asks us to check news before spreading it (al-Ḥujurāt 49:6). A simple version for children is: “Before we share something, we ask: Is it true?”

What we learnt: A fact can be checked. An opinion is a feeling or a belief. Careful thinkers check facts before they believe or share them.

Challenge yourself · extension, ages 9–10 (optional)

Listen to an advert or a conversation. Can you find one fact and one opinion?

• • •

Activity 3.4

What Happens Next?

Ages 5–8 ⏱ About 25 minutes

Learning objective: Predict what will happen next and put events in order.

What you need: Paper, a pencil, scissors (optional).

▶ Let's begin

1. Read this beginning aloud: **Amina found a small green seed on the path to school. She put it in her pocket. At home, she…**
2. Stop. Predict: what do you think happens next? Why?
3. Together, build the story: what happened first, next, then, and last?
4. Draw each part in the four boxes.

? Think about it

- What clues helped you predict?
- Does it matter what order the events come in? Try mixing them.
- Was your prediction the same as someone else’s? Why might they differ?

✎ Try it yourself

Draw four pictures in the correct order. Add the words First, Next, Then and Last under them.

First	Next	Then	Last

★ Tell me what you discovered

Tell the whole story in order. Then change the order of two parts and see how it sounds. Is it still a good story?

Parent's corner

Prediction is a big comprehension skill. During any book, pause: “What do you think will happen?” Then read on and compare.

It is fine if your child’s story is unusual. Ask them to explain it.

What we learnt: We use clues to predict, and events happen in a certain order. Good stories have a beginning, a middle and an end.

Challenge yourself · extension, ages 9–10 (optional)

Cut up a comic strip or a story, mix the parts and put them back in order.

• • •

Activity 3.5

Know Your Country

Ages 5–8 ⏱ About 30 minutes

Learning objective: Learn key facts about Nigeria and find where things are.

What you need: A map or atlas of Nigeria (or the globe), a pencil, a green pencil.

▶ Let's begin

1. Nigeria is a country in West Africa. Its capital is **Abuja**. Its biggest city is **Lagos**.
2. Nigeria has **36 states** and the Federal Capital Territory (FCT).
3. Three of its big languages are **Hausa, Yoruba and Igbo**, and there are hundreds more.
4. Find your own state on the map. Find Abuja and Lagos. Which is closer to you?
5. The flag is **green, white, green**. Colour it in below.

? Think about it

- What do you notice about the shape of Nigeria?
- Which rivers can you find? (The Niger and Benue rivers meet near Lokoja.)
- What is special about the place where you live?

✎ Try it yourself

Fill in the “Passport to Nigeria” card.

Question	My answer
My state is…	
My town or city is…	
The capital of Nigeria is…	
A language I hear at home is…	
A food from my region is…	
One special place I know is…	

★ Tell me what you discovered

Be a tour guide! Tell your family three things a visitor should know about where you live.

Parent's corner

Use a real map if you can. Children love finding their own home and school on a map or satellite view.

Ask grandparents about the places they grew up in, and add these to the map.

What we learnt: Nigeria has many states, languages and cultures. A map shows us where places are.

Challenge yourself · extension, ages 9–10 (optional)

Draw the flag of another country and write one fact about it. Where is it on the map?

Activity 3.6

Animals Around the World

Ages 5–8 ⏱ About 30 minutes

Learning objective: Group animals by their features and learn where they live.

What you need: A pencil, pictures or toy animals (if you have them), a book about animals.

▶ Let's begin

1. Scientists group animals by their features. Here are five groups:
2. **Mammals:** have fur or hair, feed milk to their babies (goat, lion, bat, whale).
3. **Birds:** have feathers and lay eggs (hen, eagle, ostrich).
4. **Reptiles:** have dry scales (lizard, snake, crocodile).
5. **Fish:** live in water and breathe with gills (tilapia, catfish).
6. **Insects:** have six legs and three body parts (ant, bee, butterfly).

? Think about it

- A bat flies. Is it a bird? What features tell you? (It has fur and feeds milk.)
- A spider has eight legs. Is it an insect? Why or why not?
- Which group has the most animals you know?

✎ Try it yourself

Sort these animals into the correct group: **goat, hen, lizard, catfish, ant, whale, bat**.

Mammals	Birds	Reptiles	Fish	Insects

★ Tell me what you discovered

Choose one animal that lives in Nigeria. Where does it live? What does it eat? What is one amazing thing about it?

Parent's corner

Seeing the real animal is best. Chickens, goats, lizards, ants and birds all fit into the groups.

Say “How do you know?” when your child sorts. They should give a feature (feathers, scales, six legs).

What we learnt: Animals can be grouped by their features: fur, feathers, scales, gills, or six legs. Features help us tell them apart.

Challenge yourself · extension, ages 9–10 (optional)

Find an animal that does not fit easily (such as a bat or a whale). Why is it tricky?

• • •

Activity
3.7

The Little Researcher

Ages 5–8 ⏱️ About 30 minutes, over two days

Learning objective: Find the answer to a question using more than one source.

What you need: A question, a notebook, a pencil, access to a book or a trusted adult, and the outdoors or your kitchen.

▶️ Let's begin

1. Choose **one** question you really want to answer (for example: “How do bees make honey?” or “Why do onions make us cry?”).
2. Write it in the box below.
3. Find out in **three ways:** (1) **Ask** someone who knows. (2) **Read** a book or a trusted page. (3) **Look or try** it yourself, if safe.
4. Write what each source told you. Do they agree?

? Think about it

- Which way gave you the best answer? Which was the quickest?
- Did any source disagree? How would you decide who is right?
- What new question did you find along the way?

✎ Try it yourself

Fill in your research card.

My question	
I asked…	
I read…	
I looked or tried…	
What I found out	
A new question I have	

★ Tell me what you discovered

Present your findings in two minutes, with one picture, to your family.

Parent's corner

Help your child pick a question that has a real answer. Guide them to trusted sources: books, teachers, elders.

Do not look up everything at once. Let them try to think first: “What do you think? How could we check?”

What we learnt: Researchers use more than one source and compare what they find. New answers lead to new questions.

Challenge yourself · extension, ages 9–10 (optional)

Make a poster or a small fact book about your question, with a title, three facts and a drawing.

Activity
3.8

My Reading Tracker

Ages 5–8 ⏱️ A few minutes each day, for four weeks

Learning objective: Build a daily reading habit and think about what you read.

What you need: This page, a pencil, books, a quiet corner and a family reader.

▶️ Let's begin

1. Choose a regular time for reading: after Fajr, after school or before bed.
2. Read or listen for **15 minutes**. Younger children can look at the pictures and tell the story.
3. Colour one star for each day you read. Try to fill a week, then a month.
4. Each time you finish a book, write it in the book list.

? Think about it

- What was the best part of the book you finished?
- Did the book make you feel anything? What?
- Would you tell a friend to read it? Why?

✎ Try it yourself

Colour a star for each day.

Week	Mon	Tue	Wed	Thu	Fri	Sat	Sun
1	☆	☆	☆	☆	☆	☆	☆
2	☆	☆	☆	☆	☆	☆	☆
3	☆	☆	☆	☆	☆	☆	☆
4	☆	☆	☆	☆	☆	☆	☆

Book title	Author	My stars (1 to 5)	My favourite part

★ Tell me what you discovered

Fill in a few book cards. Write the title, the author and give the book one to five stars.

Parent's corner

Reading together for 15 minutes a day builds vocabulary and a close bond. Keep it relaxed. If your child skips a day, simply start again.

Children copy what they see: let them see you reading, too.

What we learnt: Reading a little every day makes us better readers and fills our minds with new ideas.

Challenge yourself · extension, ages 9–10 (optional)

Read a book twice. What did you notice the second time that you missed the first time?

READING CORNER

The Baobab, the Tree That Stores Water

Read this passage together. Read it once for fun, and once more slowly to find the answers.

In the dry parts of Africa, including northern Nigeria, there grows a very strange tree. It is the **baobab**. Its trunk is wide and fat, and its branches look like roots reaching into the sky. Some people call it the "upside-down tree".

The baobab can live for more than a thousand years. In the rainy season, its trunk can soak up and store a lot of water. When the dry season comes, the tree can survive on this stored water.

Many animals and people depend on the baobab. Its fruit is rich in vitamin C, and people eat it or make drinks from it. Birds nest in its branches, and insects live in its bark.

Answer these questions

1 What is the baobab sometimes called, and why?

2 How does the baobab survive the dry season?

3 Name two living things that use the baobab.

4 What does the word "survive" mean? Tell it in your own words.

5 Which part did you find most surprising? Why?

Draw your baobab

My upside-down tree

REFLECTION JOURNAL

Looking back at Part 3

Something new I learnt

Something I found interesting

A question I still have

Something I want to investigate

Something I am grateful to Allah for

Draw your favourite moment from this part

PART 4

The Confident Communicator

In this part you will explore

1. Speaking for one minute
2. Listening with care
3. Using a clear voice
4. Telling stories
5. Kind and polite words
6. Asking good questions
7. Giving clear instructions
8. Giving a little talk

BIG QUESTION

How would you explain rain to someone who has never seen it?

Activities 4.1 to 4.8 · talk about the big question together before you begin

The Confident Communicator

Having good ideas is wonderful. Sharing them clearly and kindly is even better. In this part you will practise speaking, listening, telling stories, being polite, asking questions, giving instructions and giving a short talk.

Every confident speaker started small and shy. **Brave first, perfect later.**

Question of the Day

Pick one at breakfast, in the car or at bedtime. There are no wrong answers. Ask "Why do you think so?"

- What is something you are really good at? Can you teach it to us?
- Why do we have two ears and one mouth?
- What is the kindest thing someone said to you this week?
- If you could say one thing to the whole world, what would it be?
- How can you tell when someone is really listening?
- What is your favourite story, and why?

Activity 4.1

Show and Tell

Ages 5–8 ⏱ About 20 minutes

Learning objective: Speak for one minute about something special, in a clear order.

What you need: A special object (a toy, a book, a shell, a photograph), a family audience.

▶ Let's begin

1. Choose something that matters to you. Hold it where everyone can see.
2. Tell your audience: **What is it? Where did you get it? Why is it special to you?**
3. Look at the people, not the floor. Speak slowly and clearly.
4. Let the audience ask you one question.

? Think about it

- What helped you feel brave?
- What did you say first? What did you say last?
- What question did your audience ask? Did you know the answer?

✎ Try it yourself

Plan your talk by filling in the three boxes below, then say it aloud.

What is it?	Where did I get it?	Why is it special?

★ Tell me what you discovered

Say your talk again, and this time see if you can say it without looking at the page.

Parent's corner

Sit where your child can see you and smile. Listen all the way to the end before saying anything.

Give kind, specific praise: “I loved how you told us where it came from.”

What we learnt: A clear talk has a beginning, a middle and an end. Looking at people and speaking slowly help them understand.

Challenge yourself · extension, ages 9–10 (optional)

Give the talk to a person you have not met well, such as a neighbour or a cousin. Notice what changes.

Activity 4.2

Listening Ears

Ages 5–8 ⏱ About 20 minutes

Learning objective: Listen carefully and show that you understood.

What you need: A group of at least three people, a small blanket or a cloth.

▶ Let's begin

1. **Whisper chain.** Sit in a row. The first person whispers a sentence into the next person's ear. Pass it on until the last person says it aloud.
2. Was it the same? What changed?
3. **Sound guess.** Close your eyes. Someone makes a sound (clapping, tapping, pouring water). What is it?
4. **Simon says.** Follow only the instructions that begin with "Simon says".

? Think about it

- Why did the message change along the chain?
- What helps you listen well? (Looking, being still, not talking.)
- How can you show a person that you are listening?

✎ Try it yourself

Practise the listening checklist with someone in your family. Tick each one you did.

Did I...	Yes	Not yet
look at the speaker?		
keep quiet until they finished?		
nod or smile?		
say back what they told me?		

★ Tell me what you discovered

Listen to someone for one minute without talking. Then tell them one thing you learnt from what they said.

Parent's corner

Model good listening. Put down your phone and look at your child when they talk.

Praise listening in the moment: "Thank you for waiting till I finished."

What we learnt: Good listeners look, wait, and show they understood. Messages change when we do not listen carefully.

Challenge yourself · extension, ages 9–10 (optional)

Play whisper chain with a longer sentence. How long can you make it before it changes?

• • •

Activity 4.3

Say It Clearly

Ages 5–8 ⏱ About 20 minutes

Learning objective: Use your voice well: loud, soft, fast, slow and clear.

What you need: A grown-up, a mirror if you have one.

▶ Let's begin

1. Say your name in a whisper, a normal voice and a big voice. Which is best for a classroom?
2. Say "Good morning, everyone" **slowly** and then **quickly**. Which is easier to understand?
3. Try these tongue twisters slowly first, then a little faster: "Red lorry, yellow lorry." "She sells sea shells by the sea shore." "Peter Piper picked a peck of pickled peppers."
4. Open your mouth wide as you say them. Do the words come out clearer?

? Think about it

- When is a quiet voice the right voice? When is a big voice right?
- Which tongue twister was hardest? Why?
- What did you notice about your mouth, tongue and lips?

✎ Try it yourself

Say the sentence below three times, each time with a different feeling: happy, sleepy and surprised. "I found a frog in my shoe."

★ Tell me what you discovered

Read a favourite page aloud, as if you are the news reader. Slow, clear and with a smile.

Parent's corner

Do not correct pronunciation harshly. Say the word back correctly and move on.

Qur'an recitation also trains the mouth and ear for clear speech. Link it gently: "Tajwīd helps us say every letter well."

What we learnt: Clear speaking is not about being loud. It means slow, clear words, a good voice for the place and an open mouth.

Challenge yourself · extension, ages 9–10 (optional)

Make up your own tongue twister with three words that start with the same sound.

• • •

Activity 4.4

Tell Me a Story

Ages 5–8 ⏱ About 30 minutes

Learning objective: Tell a story with a beginning, a middle and an end.

What you need: Paper, scissors, a pencil.

▶ Let's begin

1. Cut the paper into 12 small squares. On four write a **character** (a fox, a girl called Safiya, a robot, a tailor). On four write a **place** (market, forest, school, river). On four write a **problem** (lost, hungry, scared, late).
2. Mix each pile. Pick one from each.
3. Tell a story using all three. Say how the problem is solved.
4. Add a beginning ("Once upon a time…") and an ending ("And from that day…").

? Think about it

- What made your story exciting?
- How did the character feel? How can you show it with your voice?
- What would you change if you told it again?

✎ Try it yourself

Plan your story.

Character	Place	Problem	How it ended

★ Tell me what you discovered

Tell your story to your family. Use different voices for different characters.

Parent's corner

Let your child lead. Ask “And then what happened?” rather than suggesting.

Storytelling is an old tradition in many Nigerian homes. Ask an elder to tell a story, then ask your child to retell it.

What we learnt: A story needs a character, a place and a problem. It has a beginning, a middle and an end.

Challenge yourself · extension, ages 9–10 (optional)

Tell the same story from the point of view of a different character. How does it change?

• • •

Activity 4.5

Kind Words

Ages 5–8 ⏱ About 25 minutes

Learning objective: Use polite and kind words, and know when to use them.

What you need: A grown-up to play different roles with you.

وَقُولُواْ لِلنَّاسِ حُسْنًا

And speak good words to people.

The Qur’an, al-Baqarah 2:83

▶ Let's begin

1. We will act out four little scenes. Your grown-up is the other person.
2. Scene 1: Greet someone who comes to your door. Say **As-salāmu ʿalaykum**.
3. Scene 2: You need help to reach a cup. How do you ask politely? (Please… Thank you.)
4. Scene 4: You accidentally knock over a friend’s drawing. What do you say?
5. Scene 4: You do not want to share. How can you say no kindly?

? Think about it

- How does a kind word make you feel? How does a rude word make you feel?
- Why is it important to say sorry, and to say it sincerely?
- What kind words do your family say most?

✎ Try it yourself

Write or draw three kind phrases and when to use them.

Kind words	When I use them
As-salāmu ʿalaykum	
Please / Thank you	
Sorry / Excuse me	

★ Tell me what you discovered

Choose one kind word to say to someone today, and tell us afterwards who you said it to and how it went.

Parent's corner

The Prophet ﷺ said: “Smiling in your brother’s face is charity” (al-Tirmidhī 1956). He also encouraged spreading the greeting of salām (Muslim 54).

Practise at home: greeting when entering, saying thank you to whoever serves food.

What we learnt: Kind words open hearts. We greet, ask politely, thank people and say sorry sincerely.

Challenge yourself · extension, ages 9–10 (optional)

Learn how to greet someone in two other languages spoken in your area.

Activity
4.6

Ask Good Questions

Ages 5–8 ⏱ About 30 minutes

Learning objective: Ask open questions and listen to the full answer.

What you need: A pencil and a person you would like to interview: a parent, a grandparent, a neighbour or a teacher.

▶ Let's begin

1. Choose someone to interview. Ask permission and agree on a time.
2. Prepare five questions. Start with words like **What, Why, How, Tell me about...**
3. Do the interview. Write or draw the answers. Let the person finish before you ask the next question.
4. Thank them at the end.

? Think about it

- Which question got the best answer? Why?
- Did the person tell you something you did not expect?
- What follow-up question would you ask next time?

✎ Try it yourself

Write your questions and the answers.

My question	Their answer

★ Tell me what you discovered

Tell your family what you learnt from the interview. What was the most interesting thing?

Parent's corner

Choose a topic your child will enjoy: childhood games, what school was like, a favourite recipe.

This is a lovely way to honour elders and record family stories.

What we learnt: Open questions begin with what, why and how. Good interviewers listen and ask follow-up questions.

Challenge yourself · extension, ages 9–10 (optional)

Interview two people about the same question. Compare their answers.

• • •

Activity 4.7

Tell Me How

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Give instructions in order, using clear words.

What you need: Paper, a pencil, two chairs.

▶️ Let's begin

1. **Back-to-back drawing.** Sit back to back. One person draws a simple picture (a house, a flower) and tells the other how to draw it, but without saying what it is.
2. The listener draws. Compare at the end.
3. Swap places. What was easy? What was hard?
4. Now explain how to wash hands step by step, using First, Next, Then and Finally.

? Think about it

- Which words helped the most? (Above, below, left, right, in the middle.)
- What happened when the instruction was not clear?
- Why are step-by-step words so useful?

✎ Try it yourself

Write or draw the steps for a task you do every day.

Step	What I do
First	
Next	
Then	
Finally	

★ Tell me what you discovered

Give your family the instructions for your task. Can they do it exactly as you said?

Parent's corner

Position words (left, right, above, below, next to) are tricky for many children. Practise them during the day, for example “Put it under the chair.”

Link it to wuḍūʾ: it is a sequence done in a set order.

What we learnt: Clear instructions use order words and position words, so someone else can follow them exactly.

Challenge yourself · extension, ages 9–10 (optional)

Give directions from your front door to the nearest shop without using the word “there”.

Activity
4.8

My Little Talk

Ages 5–8 ⏱️ About 30 minutes, over two days

Learning objective: Plan and give a short talk of one to two minutes.

What you need: Paper, a pencil, a family audience, a timer (optional).

▶️ Let's begin

1. Choose a topic: **my favourite place, my best friend, an animal I like, or something I can do well.**
2. Plan three parts: an **opening** (say what your talk is about), **three points**, and a **closing** (say thank you).
3. Practise to yourself twice, then once for a grown-up.
4. Give your talk. Smile at the start and the end!

? Think about it

- Which part was easiest? Which part was hardest?
- What would you change next time?
- What did you do to feel braver?

✎ Try it yourself

Plan your talk.

Part	What I will say
Opening	
Point 1	
Point 2	
Point 3	
Closing	

★ Tell me what you discovered

Ask your audience to give you **two stars** (two things you did well) and **one wish** (one thing to improve).

Parent's corner

Give two stars and a wish yourself: two good things, one gentle suggestion.

Record the talk if your child agrees. Watching it again builds confidence.

What we learnt: A good talk has an opening, three points and a closing. Practising makes us braver.

Challenge yourself · extension, ages 9–10 (optional)

Give your talk to a bigger audience, such as your class, the extended family, or a gathering.

SPEAKING CHALLENGE

The family news show

Become a TV reporter! Once a week for four weeks, tell the family the news.

What to do

1. Collect three pieces of news from the week: something you saw, something you learnt, something kind someone did.
2. Practise saying each one in one clear sentence.
3. On Friday, sit up straight, say “Good evening, here is the news…” and tell your three stories.
4. End with “Thank you for listening. Goodnight!”

Week	My three news stories	My stars (☆ ☆ ☆)
1		
2		
3		
4		

REFLECTION JOURNAL

Looking back at Part 4

Something new I learnt

Something I found interesting

A question I still have

Something I want to investigate

Something I am grateful to Allah for

Draw your favourite moment from this part

PART 5

The Creative Mind

In this part you will explore

1. Mixing colours
2. Making pictures from shapes
3. Finishing unfinished pictures
4. Inventing solutions
5. Building with recycled things
6. Acting and showing feelings
7. Rhythm and rhyme
8. Making art from nature

BIG QUESTION

If you could invent anything at all, what would it be?

Activities 5.1 to 5.8 · talk about the big question together before you begin

PART 5 · IMAGINATION, ART AND INVENTING

The Creative Mind

Allah is **Al-Khāliq** (the Creator), and He gave people imagination. In this part you will draw, mix colours, make shapes, finish pictures, invent things, build models, act and sing.

There is no "wrong" in creating. **Try it, look at it, make it better.**

Question of the Day

Pick one at breakfast, in the car or at bedtime. There are no wrong answers. Ask "Why do you think so?"

- What would you invent if you could invent anything?
- If you could colour the sky a different colour, which would you choose?
- What would your dream house look like?
- If animals could talk, which would be the funniest?
- What is the most beautiful thing you have ever seen?
- How could you turn an old box into something wonderful?

Activity 5.1

Colour Magic

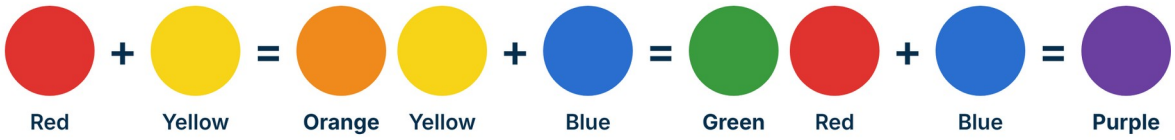

Ages 5–8 ⏱ About 25 minutes

Learning objective: Learn how colours mix and make new ones.

What you need: Red, yellow and blue crayons, paint or coloured pencils; paper; water if painting.

▶ Let's begin

1. Colour the first circle in each row with the first colour. Then colour over it with the second colour.
2. What do you get? Check the picture below.
3. Red and yellow make **orange**. Yellow and blue make **green**. Red and blue make **purple**.
4. Now mix more: a little red with a lot of yellow, then a lot of red with a little yellow.

? Think about it

- Which mixed colour surprised you most?
- How could you make a lighter or darker colour?
- What colours do you see in a rainbow?

✎ Try it yourself

Paint or colour the sample squares and name each new colour.

Orange	Green	Purple

★ Tell me what you discovered

Paint a picture of a garden using only the three mixed colours and the three main colours.

My colour garden

Parent's corner

Let your child mix freely without telling them what to make. Discovery is the point.

Name colours precisely: not “blue”, but “sky blue”, “navy”, “turquoise”.

What we learnt: Red, yellow and blue are the primary colours. Mixing two of them makes a new colour.

Challenge yourself · extension, ages 9–10 (optional)

Mix as many shades of green as you can. Give each a name, such as “leaf” or “lemon-lime”.

• • •

Activity 5.2

Shape Pictures

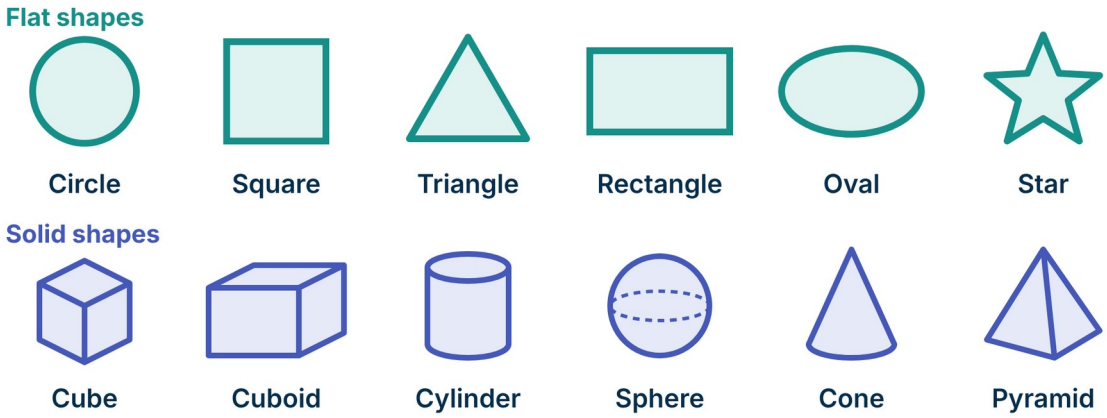

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Make pictures from simple shapes and name the shapes you use.

What you need: Coloured paper, scissors, glue, a pencil.

▶️ Let's begin

1. Look at the flat shapes in the picture. Which can you name?
2. Cut out circles, squares, triangles and rectangles from coloured paper.
3. Arrange them to make a picture: a house, a boat, a robot or an animal.
4. Glue them down and count how many of each shape you used.

? Think about it

- Which shapes did you use most?
- How did you make a roof, a wheel, a window?
- What new shape can you make by joining two others?

✎ Try it yourself

Count your shapes.

Shape	How many?
Circles	
Squares	
Triangles	
Rectangles	

★ Tell me what you discovered

Show your shape picture and tell its story in three sentences.

Parent's corner

Notice shapes around the house together: a round plate, a rectangular door, a square tile.

The shapes of Islamic geometric patterns are an excellent next step: circles, squares and stars repeated beautifully.

What we learnt: Everything can be made from simple shapes. Joining shapes makes new ones.

Challenge yourself · extension, ages 9–10 (optional)

Make a pattern tile by repeating one shape in a circle, like in Islamic art. What do you notice?

Activity 5.3

Finish the Picture

Ages 5–8 ⏱ About 25 minutes

Learning objective: Turn an unfinished drawing into something of your own.

What you need: A pencil and coloured pencils.

▶ Let's begin

1. Look at the four unfinished pictures.
2. Choose one. What could it become? (A circle might be a clock, a face, a wheel, a fruit.)
3. Finish the drawing in your own way. Add colour and details.
4. Give it a title.

Picture 1 Picture 2 Picture 3 Picture 4

? Think about it

- What did you see in the first lines?
- What would make your picture different from someone else's?
- How did you decide what to add?

✎ Try it yourself

Finish the other pictures a different way. Compare them. How many ideas can you have from one start?

★ Tell me what you discovered

Hold up your favourite and tell a short story about it.

Parent's corner

Do not ask "What is it?" Ask "Tell me about your picture."

There is no wrong way. Take photos of your child's work to keep.

What we learnt: One start can become many different pictures. Imagination turns lines into something new.

Challenge yourself · extension, ages 9–10 (optional)

Draw your own starting lines and give them to a friend or a sibling to finish.

• • •

Activity 5.4

Little Inventor

Ages 5–8 ⏱️ About 30 minutes

Learning objective: Think of a problem and invent something to solve it.

What you need: Paper, a pencil, coloured pencils.

▶️ Let's begin

1. Think of a small problem you have: shoes that go missing, a bag that is too heavy, a cup that spills.
2. Imagine something that could solve it. Do not worry about whether it is possible yet!
3. Draw it. Label its parts. Name your invention.
4. Say how it works, to your family.

? Think about it

- What problem does your invention solve?
- Who would use it?
- What could go wrong? How would you make it safer or better?

✎ Try it yourself

Fill in the invention card.

My invention is called…	
The problem it solves…	
How it works…	
Who would use it…	

★ Tell me what you discovered

Draw your invention here and label at least three parts.

My invention

Parent's corner

Praise wild ideas first. Practical questions can follow: “What would it be made of?”

Great Muslim inventors, such as al-Jazarī (famous for his book on ingenious machines), began with everyday problems.

What we learnt: Inventors notice problems and imagine new ways to solve them. They test, improve and share their ideas.

Challenge yourself · extension, ages 9–10 (optional)

Make a model of your invention from boxes, tape and paper.

• • •

Activity 5.5

Box City

Ages 5–8 ⏱️ About 40 minutes

Learning objective: Plan and build a model using recycled things.

What you need: Cardboard boxes, tubes, bottle tops, tape, glue, crayons or paint, scissors (adult help).

Safety first

A grown-up should cut cardboard and handle scissors. Do not use sharp tools or hot glue.

▶️ Let's begin

1. Look at your recycled things. What could they become? A tube is a tower, a box is a house, a lid is a pond.
2. Plan a small town with a mosque, a school, a market and a park.
3. Build each part and decorate it.
4. Place them on a big sheet to make your town. Draw roads between them.

? Think about it

- How did you choose where to put things?
- What would your town need that you did not include? (A hospital? A library?)
- How did you make parts stand up?

✎ Try it yourself

List what you built and what you used to make it.

Part of my town	Made from

★ Tell me what you discovered

Give your family a tour of your town and explain why each place is important.

Parent's corner

Recycling and re-using teach resourcefulness and care for Allah's earth.

Keep your child's building for a few days; they will add to it.

What we learnt: We can turn ordinary things into new things. Good plans help models stand and work.

Challenge yourself · extension, ages 9–10 (optional)

Add a rule to your town: a road safety sign, a clean-up sign or a recycling bin.

Activity
5.6

Act It Out

Ages 5–8 ⏱ About 25 minutes

Learning objective: Use your body and voice to show feelings and tell a story.

What you need: A few props (a hat, a scarf, a spoon), family members.

▶ Let's begin

1. Show these feelings with your face only, without words: happy, sad, surprised, scared, tired, proud.
2. Now act an animal: a lion, a bird, a snail, an elephant. Can your family guess?
3. Choose a short story you know, such as Prophet Ibrāhīm and the birds, or a folk tale.
4. Act it out with your family, giving each person a part.

? Think about it

- How did your body change when you acted a big animal and a small animal?
- How can you show feelings without saying them?
- What was the hardest part?

✎ Try it yourself

Act out your story in four short scenes: the beginning, the problem, the middle and the happy ending.

★ Tell me what you discovered

Choose the best scene. Say what you felt as you acted.

Parent's corner

Join in! Children love when parents act with them.

Acting builds empathy: they imagine how someone else feels.

What we learnt: We can show feelings with our face, body and voice. Acting helps us understand other people.

Challenge yourself · extension, ages 9–10 (optional)

Act a story without words, and ask the audience to retell it.

Activity 5.7

Rhythm and Rhyme

Ages 5–8 ⏱ About 25 minutes

Learning objective: Notice rhythm and rhyme, and make up a little rhyme.

What you need: A pencil, two spoons, a cup or tin to tap.

▶ Let's begin

1. Clap the rhythm of your name. How many claps?
2. Tap the rhythm of other words: banana, mango, Nigeria, Alhamdulillah.
3. Find rhymes for these: cat, sun, tree, play. (Cat, bat, mat…)
4. Make a two-line rhyme about something in your day.

? Think about it

- Which words have the same number of claps?
- What are the rhyming words? Do they always look the same at the end?
- How can rhythm help us remember things?

✎ Try it yourself

Write three words that rhyme with each.

Word	Rhymes
sun	
tree	
play	

★ Tell me what you discovered

Say your rhyme to someone, with a rhythm. Add a tap or a clap.

Parent's corner

Nasheeds and rhymes help children remember. Invite your child to compose a simple one with you.

Rhyming skill is a strong sign of future reading success.

What we learnt: Words have rhythm (beats) and some rhyme (end sounds the same). Rhythm and rhyme help us remember.

Challenge yourself · extension, ages 9–10 (optional)

Write a four-line poem about the rain, with two rhyming pairs.

Activity
5.8

Nature's Art

Ages 5–8 ⏱ About 40 minutes

Learning objective: Make a picture or a pattern from things found in nature.

What you need: Leaves, small stones, twigs, flower petals (fallen ones), a sheet of paper or a flat spot, glue.

Safety first

Only pick up fallen leaves and petals. Do not pick plants, and wash your hands afterwards.

▶ Let's begin

1. Walk around with a grown-up and collect ten fallen leaves, stones, twigs and petals.
2. Lay them out. Sort them by colour, shape and size.
3. Arrange them into a picture, a pattern or a face.
4. Take a photograph or glue them onto paper.

? Think about it

- How are the leaves alike? How are they different?
- Which would you use for a face? Why?
- What colours did you find in nature?

✎ Try it yourself

Make a nature pattern, such as leaf, stone, leaf, stone, twig.

★ Tell me what you discovered

Name your artwork. Explain what you made, and thank Allah for the colours and shapes in nature.

My nature art, or a sketch of it

Parent's corner

Nature art is free, low-effort and endlessly varied. Take photos before it blows away.

Link to gratitude: “Look how many colours Allah made.”

What we learnt: Nature gives us colours, shapes and patterns to make art. We can make beauty from simple things.

Challenge yourself · extension, ages 9–10 (optional)

Make a nature mandala: arrange things in rings from the centre outwards, with a repeating pattern in each ring.

• • •

WEEKEND PROJECT

Build a miniature town

Use the shapes and boxes you made to build a miniature town with a map, a name and rules.

What to do

1. Choose a name for your town and write it on a sign.
2. List five places your town needs and what each is for.
3. Build them from boxes and paper, and place them on a big sheet.
4. Draw roads, a river and a park. Add small people from clay or paper.
5. Make one rule for the town (for example, no litter) and write it on a sign.

Place	What it is for	Who goes there

REFLECTION JOURNAL

Looking back at Part 5

Something new I learnt

Something I found interesting

A question I still have

Something I want to investigate

Something I am grateful to Allah for

Draw your favourite moment from this part

PART 6

The Little Mathematician

123

In this part you will explore

1. Hunting for numbers
2. Counting in jumps
3. Rows and equal groups
4. Solid shapes
5. Measuring length and weight
6. Telling the time
7. Money and change
8. Sharing fairly

BIG QUESTION

How many of your steps is it from your bed to the door?

Activities 6.1 to 6.8 · talk about the big question together before you begin

The Little Mathematician

Maths is everywhere: in the market, on the clock, in the kitchen and in the shape of a leaf. In this part you will hunt for numbers, count in jumps, discover arrays, hunt for shapes, measure, tell the time, handle money and share fairly.

Mistakes are welcome. **A wrong answer is a clue that points the way.**

Question of the Day

Pick one at breakfast, in the car or at bedtime. There are no wrong answers. Ask "Why do you think so?"

- How many steps is it from your bed to the door? How could we find out?
- Would you rather have half a big cake or a third of a bigger cake? Why?
- What is the biggest number you know? Is there a bigger one?
- How many minutes do you think it takes to eat a meal? Let us time it!
- Which is heavier, a kilogram of rice or a kilogram of feathers?
- How do shopkeepers know how much change to give?

Activity 6.1

Number Hunt

Ages 5–8 ⏱ About 20 minutes

Learning objective: Find and read numbers in everyday life, and count objects accurately.

What you need: A pencil, paper and your eyes! A walk around the house or compound.

▶ Let's begin

1. Go on a hunt for numbers: on a clock, a calendar, a phone, a price tag, a house number, a packet.
2. Write each number you find and where you found it.
3. Count things in your room: books, windows, chairs. Touch each one as you count so you do not count it twice.
4. Which is the biggest number you found? Which is the smallest?

? Think about it

- Why do we need numbers in daily life?
- What happens if we count something twice, or miss one?
- Which numbers were easy to read? Which were hard?

✎ Try it yourself

Write what you found.

Number	Where I found it	What it tells me

★ Tell me what you discovered

Count something big (like the tiles on the floor or the rungs of a chair) and tell your family how you counted so you did not make a mistake.

Parent's corner

Counting means touching or pointing to each item once. Many children say the number words faster than they point; slow down and match each word to one object.

Bring numbers into talk: “We need three cups. How many do we have?”

What we learnt: Numbers are everywhere. We count carefully by matching one number to one object.

Challenge yourself · extension, ages 9–10 (optional)

Hunt for the biggest number you can find at home (a phone number, an expiry date, a measurement). Read it aloud correctly.

• • •

Activity 6.2

Counting in Jumps

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Count in twos, fives and tens and notice the patterns.

What you need: Chalk or paper, a pencil, 20 small objects (stones or beans).

▶️ Let's begin

1. Make a number track from 1 to 30 on the floor with chalk or paper squares.
2. Hop on every second number, counting 2, 4, 6… What do you notice about the numbers you land on?
3. Now jump in fives (5, 10, 15…) and tens (10, 20, 30).
4. Check: how many jumps to reach 20 in twos? In fives?

? Think about it

- What pattern do the numbers have when counting in fives? (They end in 0 or 5.)
- Why are fives and tens useful when counting money or fingers?
- What happens if you start at a different number?

✎ Try it yourself

Fill in the missing numbers.

Counting in…	Fill in the missing numbers
Twos	2 4 _ 8 10 14 _
Fives	5 10 _ 20 30 _ 40
Tens	10 _ 30 40 60 _ 80

★ Tell me what you discovered

Count the fingers of everyone in your family in twos, fives and tens. How many altogether?

Parent's corner

Hands and feet are natural for counting in fives and tens. Count objects as you share them out: two biscuits each.

The missing numbers are 6, 12, 16; 15, 25, 35; 20, 50, 70 (also in the Answers section).

What we learnt: We can count faster in jumps of 2, 5 or 10. Counting in jumps shows patterns, and helps with money and multiplication.

Challenge yourself · extension, ages 9–10 (optional)

Count backwards in tens from 100 (100, 90, 80…). Then in fives from 50.

• • •

Activity
6.3

Egg-Box Maths

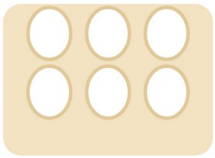

Ages 5–8 ⏱ About 25 minutes

Learning objective: Use arrays (rows and columns) to count in groups and meet multiplication.

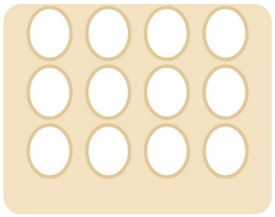

What you need: An empty egg carton (6 or 12 holes), or small stones and a tray; a pencil.

▶ Let's begin

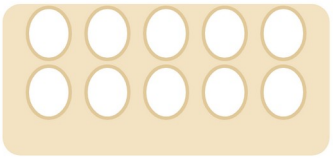

1. Look at the three trays of eggs below. Each has rows with the same number in each.
2. Count the eggs in **one row**. How many rows are there?
3. Count the total by counting each row in groups, instead of one by one.
4. Write the total on the line.

2 rows of 3
= ___ eggs

3 rows of 4
= ___ eggs

2 rows of 5
= ___ eggs

? Think about it

- Is it quicker to count one by one or in rows?
- What do you notice if you turn the tray so that rows become columns? (The total stays the same.)
- What other things come in rows and columns? (Windows, bricks, tiles.)

✎ Try it yourself

Use stones to make **3 rows of 5**. How many are there? Now make **5 rows of 3**. Is the total the same?

★ Tell me what you discovered

Make your own array with 12 stones in three different ways (for example 2 rows of 6, 3 rows of 4, 4 rows of 3).

My stone arrays

Parent's corner

This is the idea of multiplication without the word. Say it as “2 rows of 3 is 3 + 3 = 6”.

The answers are 6, 12 and 10.

What we learnt: An array is objects in equal rows and columns. We can count them in groups, and the total is the same however we turn it.

Challenge yourself · extension, ages 9–10 (optional)

Find the arrays in your home (tiles, egg trays, a window). Write the multiplication fact for each.

• • •

Activity 6.4

Shape Detectives

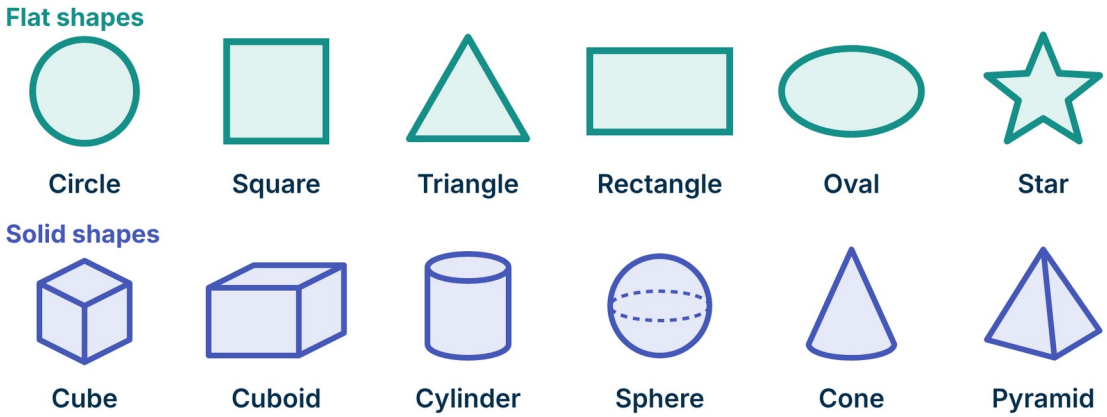

Ages 5–8 ⏱ About 25 minutes

Learning objective: Name solid shapes and find them in the world around you.

What you need: Things from the kitchen and house: a ball, a tin, a box, a funnel, a dice.

▶ Let's begin

1. Look at the solid shapes in the picture.
2. Find something at home that looks like each: a ball is a **sphere**, a tin is a **cylinder**, a box is a **cuboid**, a dice is a **cube**, a funnel is a **cone**.
3. Pick them up. Can they roll? Can they stack? Which have flat faces?
4. Fill in the table.

? Think about it

- Which shapes can roll? Which cannot?
- Which shapes are good for stacking? Which are best for rolling?
- Why are tins and bottles usually cylinders?

✎ Try it yourself

Fill in the table.

Shape	Something at home	Can it roll?	Flat faces?
Sphere			
Cylinder			
Cuboid			
Cube			
Cone			

★ Tell me what you discovered

Build the tallest tower you can using only stackable shapes. Then try one with rolling shapes. What happens?

Parent's corner

Use real objects as much as possible. Feel the faces and edges together.

Talk about the shape words: face, edge, corner (vertex).

What we learnt: Solid shapes have names and properties. Some roll, some stack, and some do both.

Challenge yourself · extension, ages 9–10 (optional)

Count the faces, edges and corners of a cube. Write what you found.

Activity 6.5

How Long, How Heavy?

Ages 5–8 ⏱ About 30 minutes

Learning objective: Measure length with hands and a ruler, and compare weights.

What you need: A ruler, a piece of string, a bag of rice or beans, small objects, a kitchen scale (if you have one).

▶ Let's begin

1. Measure your table in **hand spans**. Your grown-up measures it too. Are your answers the same? Why not?
2. Now measure the same table with a ruler or tape. The answer is always the same.
3. Pick up two objects, one in each hand. Predict which is heavier. Check with a balance, or just by feel.
4. Fill in the table.

? Think about it

- Why are rulers better than hand spans?
- Does bigger always mean heavier?
- What do we use to measure length, weight and how much a bottle holds?

✎ Try it yourself

Measure and compare.

Object	My hand spans	In centimetres
A book		
The table		
My foot		

★ Tell me what you discovered

Tell your family which method was best and why a standard unit, like a centimetre, is so useful.

Parent's corner

Let your child discover the problem with hand spans before introducing the ruler.

Cooking is a natural way to practise measuring: a cup of rice, 100 grams, a litre of water.

What we learnt: Standard units, like centimetres and kilograms, mean everyone gets the same answer. Different hands give different answers.

Challenge yourself · extension, ages 9–10 (optional)

Make a "heaviest to lightest" line of five household objects. Check with a scale.

• • •

Activity 6.6

Clock Time

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Read the time to the hour and half hour, and link time to the day.

What you need: A real clock or a paper clock, a pencil.

▶️ Let's begin

1. The **short hand** shows the hour. The **long hand** shows minutes. When the long hand points to 12, it is "o'clock". When it points to 6, it is "half past".
2. Look at Clock A, B, C and D. Write the time under each.
3. Move the hands of a real clock to match a time your grown-up calls out.
4. Draw the hands on the blank clocks to show your daily times.

Clock A

It is _____

Clock B

It is _____

Clock C

It is _____

Clock D

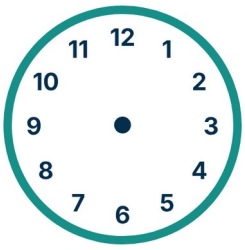

It is _____

? Think about it

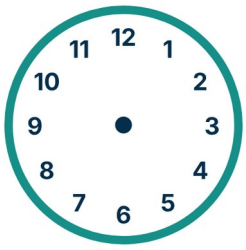

- What is the time when you wake up? When do you have lunch?
- How long is it between Zuhr and ʿAṣr, roughly?
- Why do we need clocks?

✎ Try it yourself

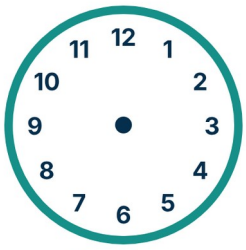

Draw the hands on the clocks to show when you usually do these things.

Wake up

Lunch

Bedtime

★ Tell me what you discovered

Tell your family what you do at one o’clock, half past three and seven o’clock.

Parent's corner

Use a real analogue clock in your home. Digital clocks are easy but hide the idea of time passing.

The answers for A, B, C and D are in the Answers section.

What we learnt: The short hand shows the hour and the long hand shows the minutes. O’clock and half past are the first times to learn.

Challenge yourself · extension, ages 9–10 (optional)

Learn “quarter past” and “quarter to”. Draw clocks showing 4:15 and 8:45.

• • •

Activity 6.7

Market Day

Ages 5–8 ⏱ About 30 minutes

Learning objective: Use money to buy and give change in a pretend shop.

What you need: Paper “naira” notes and coins (cut from paper and marked ₦5, ₦10, ₦20, ₦50, ₦100), small items with price labels.

▶ Let's begin

1. Set up a shop at home: price items at ₦20, ₦50, ₦100 or ₦200.
2. Take turns: one is the shopkeeper, the other is the customer.
3. The customer chooses an item, pays, and the shopkeeper gives change.
4. Swap roles and buy two items this time.

? Think about it

- How did you work out the change?

- What would you do if you did not have enough money?
- Why is it important for a shopkeeper to be honest and to give the correct change?

✎ Try it yourself

Work out the change.

I buy	It costs	I pay	My change
A pencil	₦50	₦100	
A biscuit	₦80	₦100	
An orange	₦30	₦50	

★ Tell me what you discovered

If you had ₦500, what would you buy? Make a shopping list that adds up to less than ₦500. Show how you added it.

Parent's corner

Real coins and notes make this more exciting. Let your child pay at a shop under supervision.

The change: ₦50, ₦20, ₦20 (also in the Answers section).

What we learnt: Money is used to buy things. Change is what the shop gives back when we pay more than the price. We must always be honest with money.

Challenge yourself · extension, ages 9–10 (optional)

Make a price list and add up three items, then work out the change from ₦500.

• • •

Activity 6.8

Fair Shares

Ages 5–8 ⏱ About 25 minutes

Learning objective: Share things equally and meet halves and quarters.

What you need: A piece of paper, bread or a flat food item, 12 small objects, scissors.

▶ Let's begin

1. Fold a sheet of paper in **half**. Are the two parts the same size? Colour one.
2. Fold it in half again. You now have **quarters**. How many quarters make a whole?
3. Share 12 objects equally between 2, 3 and 4 people. How many does each get?
4. What happens if you cannot share equally? (There is a remainder.)

? Think about it

- What does “fair” mean when sharing?
- Is one half of a big pizza the same as one half of a small one? Why or why not?
- How do you decide who cuts and who chooses first?

✎ Try it yourself

Colour in the fractions.

Fraction	Colour in this much	Number of parts
Half		2
Quarter		4
Three quarters		4

★ Tell me what you discovered

Share a snack equally in your family, and explain how you did it.

Parent's corner

The Prophet ﷺ encouraged fairness and sharing. Link maths to values: “Fair means everyone gets the same.”

Halving food and sharing it out is the best way to learn fractions.

What we learnt: We can share things into equal parts. Half means two equal parts, and a quarter means four equal parts.

Challenge yourself · extension, ages 9–10 (optional)

Share 10 sweets between three people. How many does each get, and how many are left over? What could you do with them?

REFLECTION JOURNAL

Looking back at Part 6

Something new I learnt

Something I found interesting

A question I still have

Something I want to investigate

Something I am grateful to Allah for

Draw your favourite moment from this part

PART 7

The Independent Child

In this part you will explore

1. Getting ready by yourself
2. Keeping your space tidy
3. Helping in the kitchen, safely
4. Staying safe
5. Planning your day
6. Working in a team
7. Saving, spending and giving
8. Being responsible and kind

BIG QUESTION

What is one thing you can do all by yourself today?

Activities 7.1 to 7.9 · talk about the big question together before you begin

The Independent Child

Growing up means learning to do more for yourself and for others. In this part you will get ready alone, keep your space tidy, help in the kitchen, stay safe, keep time, work in a team, save money, take responsibility and help others.

Every little job done well makes you stronger and more helpful. **Small steps lead to big independence.**

Question of the Day

Pick one at breakfast, in the car or at bedtime. There are no wrong answers. Ask "Why do you think so?"

- What is one job you would like to learn to do all by yourself?
- What would you do if you got lost in the market?
- What is the hardest part of working in a team?
- How can you help someone at home without being asked?
- What would you do with ₦1,000 if you could spend, save and give?
- Who helps you every day, and how can you thank them?

Activity 7.1

Getting Ready by Myself

Ages 5–8 ⏱️ About 20 minutes, then every day

Learning objective: Do a simple morning routine without reminders.

What you need: The checklist below, a pencil, a clock.

▶️ Let's begin

1. Look at the routine list. Which things can you already do alone?
2. Tomorrow morning, try to do each one without being reminded.
3. Tick each step when you finish.
4. Ask your grown-up to check, and to say “well done” for each tick.

? Think about it

- Which step is the hardest? Why?
- How long does it take you? Can you get quicker?
- How do you feel when you do it alone?

✎ Try it yourself

Colour a tick for every step you do alone, each day.

I...	Mon	Tue	Wed	Thu	Fri
pray Fajr and say my morning adhkār					
wash my face and brush my teeth					
get dressed					
make my bed					
pack my bag					

★ Tell me what you discovered

Tell your family which step you are proudest of, and which you want to improve.

Parent's corner

Be patient: it will be slower at first. Resist the urge to do it for them.

Keep a calm routine at a set time. Lay out clothes the night before to ease the morning.

What we learnt: We can do many things ourselves with a routine. Each success makes the next one easier.

Challenge yourself · extension, ages 9–10 (optional)

Help a younger brother or sister with their morning routine. What did you learn about teaching?

• • •

Activity 7.2

My Tidy Space

Ages 5–8 ⏱️ About 30 minutes

Learning objective: Organise belongings and keep a space clean and tidy.

What you need: Your shelf or corner, baskets or boxes, labels, a pencil.

▶️ Let's begin

1. Choose one small space: a shelf, a drawer or a toy corner.
2. Take everything out. Sort things into groups: books, toys, clothes, things to throw away.
3. Put each group back in its own place. Label the baskets.
4. Draw a “before” and an “after” picture.

? Think about it

- What was the hardest part of tidying?
- How can a place for everything help you find things?
- Why does it matter at home that the Prophet ﷺ taught cleanliness is part of faith?

✎ Try it yourself

Draw before and after.

Before

After

★ Tell me what you discovered

Show your family your tidy space and tell them how you organised it.

Parent's corner

Help your child sort the first time, then let them take charge. Labels with pictures help younger children.

The Prophet ﷺ said: “Cleanliness is half of faith” (Muslim 223).

What we learnt: A place for everything makes it easy to find things. Tidying is a good habit and a way to care for what we have.

Challenge yourself · extension, ages 9–10 (optional)

Make a weekly cleaning chart with jobs for each family member.

Activity 7.3

Kitchen Helper

Ages 5–8 ⏱️ About 30 minutes

Learning objective: Help prepare food safely and follow simple steps.

What you need: A grown-up, washed hands, a clean table, a bowl, fruit (such as oranges, bananas or pawpaw), a plastic knife, a spoon.

Safety first

An adult must supervise every kitchen job. Children should never use sharp knives, hot pans or the stove alone. Wash hands before and after.

▶️ Let's begin

1. Wash your hands with soap for 20 seconds.
2. Wash the fruit. Peel the banana or orange with your fingers.
3. With a plastic knife (and help), cut soft fruit into pieces. Put them in a bowl.
4. Stir, serve and say **Bismillah** before eating. Say **Alhamdulillah** after.

? Think about it

- Why is washing hands important before preparing food?
- What went well? What was tricky?
- How could you help more next time?

✎ Try it yourself

Write the steps in order.

Step	What I did
1	
2	
3	
4	

★ Tell me what you discovered

Serve the fruit salad to your family. Tell them how you made it.

Parent's corner

Choose safe jobs: washing, peeling, mixing, pouring cold liquids, setting the table.

Let your child serve others first. This teaches generosity and gratitude.

What we learnt: We can help in the kitchen safely by washing hands, following steps and asking for help with anything sharp or hot.

Challenge yourself · extension, ages 9–10 (optional)

Plan a simple recipe for a family meal. List the ingredients and the steps.

• • •

Activity 7.4

Staying Safe

Ages 5–8 ⏱ About 25 minutes

Learning objective: Know what to do in the street, near strangers and in an emergency.

What you need: A grown-up, a pencil, a toy phone (optional).

Safety first

Talk about these things calmly. The goal is confidence, not fear.

▶️ Let's begin

1. **Know your details.** Practise saying your full name, your address and a parent's phone number.
2. **The road.** Walk to the kerb. Stop. Look right, look left, look right again. Listen. Hold an adult's hand.
3. **Strangers.** If someone you do not know offers a gift or a lift, say "No, thank you" and go to a trusted adult.
4. **Emergency.** In Nigeria, the national emergency number is **112**. Practise saying what you would say.

? Think about it

- Who are your trusted adults?
- What would you do if you got lost in the market? (Stay where you are, find a shop worker or a mother with children, and say your parent's name.)
- What are the safe places to play?

✎ Try it yourself

Fill in your safety card.

My safety card	
My full name	
My address	
My parent's phone number	
A trusted adult I can go to	

★ Tell me what you discovered

Act out with your grown-up: what to do if you are lost, if a stranger talks to you, or if you need help.

Parent's corner

Teach: "Your body belongs to you." Tell your child that they may say no to any touch that feels wrong, and that they must always tell you, even if told to keep it a secret.

Keep emergency contact numbers clearly displayed at home.

What we learnt: We know our name, address and a phone number. We cross roads carefully, say no to strangers and tell trusted adults if something feels wrong.

Challenge yourself · extension, ages 9–10 (optional)

Make a safety poster for your family with three rules.

Activity 7.5

Time Keeper

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Plan a day and use time wisely. **What you need:** Paper, a pencil, a clock.

▶️ Let's begin

1. List what you do on a normal day, from waking up to bedtime.
2. Draw a small picture beside each event and write its time.
3. Add the five daily prayers to your timetable.
4. Look at your day. Is there time to play? To read? To help?

? Think about it

- Which part of your day takes the longest?
- What do you do that wastes time?
- How does the prayer timetable help organise a day?

✎ Try it yourself

Fill in your day timetable.

Time	What I do
Morning	
Midday (Zuhr)	
Afternoon (ʿAṣr)	
Evening (Maghrib)	
Night (ʿIshāʾ and bed)	

★ Tell me what you discovered

Tell your family how you want to use your time better. Name one change you will make.

Parent's corner

Children cannot read an analogue timetable alone, so use pictures. Review it with them together.

Help your child see time as a gift from Allah: “How can we use our free time well today?”

What we learnt: A timetable helps us use the day well. Prayer times help organise it.

Challenge yourself · extension, ages 9–10 (optional)

Make a weekend timetable. What will you do differently from a school day?

• • •

Activity 7.6

Team Challenge

Ages 5–8 ⏱️ About 30 minutes

Learning objective: Work together towards one goal, and share jobs fairly.

What you need: Three or more people, newspaper and tape or a pile of blocks, a timer.

▶️ Let's begin

1. The challenge: **build a bridge that holds a small toy** using newspaper and tape, in 10 minutes.
2. Give each person a job: builder, tester, timekeeper, designer. Swap jobs after each try.
3. Plan together for two minutes before you start.
4. Build. Test. Talk about what worked.

? Think about it

- How did you decide who did what?
- What happened when two people wanted to do the same thing?
- How did it feel when your idea was used, or not used?

✎ Try it yourself

Fill in the team table.

Job	Who did it	How did it go?
Builder		
Tester		
Timekeeper		
Designer		

★ Tell me what you discovered

Talk about the team: what went well, and what would you do better next time?

Parent's corner

Watch quietly, then reflect with the team afterwards. “What was the best moment?”

The Prophet ﷺ said that the believers are like a building, each part supporting another (al-Bukhārī 481, Muslim 2585).

What we learnt: A team shares jobs, listens to each other and tries again. Each person matters.

Challenge yourself · extension, ages 9–10 (optional)

Try a team challenge with a new rule: no talking. How do you cooperate?

• • •

Activity 7.7

Save, Spend, Give

Ages 5–8 ⏱ About 25 minutes

Learning objective: Learn to save for a goal, spend wisely and give to others.

What you need: Three jars or boxes labelled Save, Spend and Give, a pencil, real or paper coins.

▶ Let's begin

1. Imagine you have ₦300. Decide how much goes in each jar.
2. Choose something you would like to save for. Draw it.
3. Count how many weeks it would take if you saved ₦50 a week.
4. Decide who you would like to give to: a neighbour, the masjid, a hungry person.

? Think about it

- Which jar was hardest to fill? Why?
- Why is it good to save?
- How does giving make you feel?

✎ Try it yourself

Fill in the money plan.

Jar	How much?	What for?
Save		
Spend		
Give (ṣadaqah)		

★ Tell me what you discovered

Tell your family what you are saving for and how you will get there.

Parent's corner

Let your child manage a small amount of real money, so they feel the decisions.

The Prophet ﷺ said that charity does not decrease wealth (Muslim 2588). Teach giving as a habit, even if the amount is small.

What we learnt: We can save for what we want, spend wisely and give to others. Saving and giving are both good habits.

Challenge yourself · extension, ages 9–10 (optional)

Make a savings chart and colour it in each time you save. How long to reach your goal?

Activity 7.8

I Can Be Trusted

Ages 5–8 ⏱️ About 25 minutes, then a week of practice

Learning objective: Take responsibility for a small, regular job.

What you need: The chart below and a pencil.

▶️ Let's begin

1. Choose one job you will do every day for a week: feeding a pet or chickens, watering a plant, setting the table, folding your clothes.
2. Write it in the chart.
3. Each day, colour a star when you do it without reminders.
4. At the end of the week, talk about how it went.

? Think about it

- Which days were easiest to remember? Which were hardest?
- What helped you remember?
- How does it feel when others can rely on you?

✎ Try it yourself

My job is _____. Colour a star each day.

Mon	Tue	Wed	Thu	Fri	Sat	Sun
☆	☆	☆	☆	☆	☆	☆

★ Tell me what you discovered

Tell your family how your week went and what you learnt about being responsible.

Parent's corner

Choose a job that really matters, such as feeding a pet, so that missing it has a natural effect.

The Prophet ﷺ said: “Each of you is a shepherd, and each of you is responsible for his flock” (al-Bukhārī 893, Muslim 1829).

What we learnt: Being responsible means doing our job even when nobody is checking. People can rely on us.

Challenge yourself · extension, ages 9–10 (optional)

Add a second job for the second week.

Activity 7.9

Kind Helper

Ages 5–8 ⏱️ About 30 minutes

Learning objective: Notice what others need and do something kind.

What you need: A grown-up, a pencil, a small bag or basket, paper.

▶️ Let's begin

1. Think about who may need help: a neighbour, an elder, a sibling, a cleaner at school.
2. Choose one small act of kindness, such as carrying a bag, drawing a card or sharing food.
3. Do it, then write about it.
4. Try to do the kindness quietly, without telling everybody.

? Think about it

- How did the person feel? How did you feel?
- What small kindnesses do people do for you?
- Why do you think kind acts are so valuable?

✎ Try it yourself

Plan your kindness.

Who will I help?	How will I help?	How did it go?

★ Tell me what you discovered

Tell your family about your act of kindness, and decide on another to do next week.

Parent's corner

The Prophet ﷺ said: "Whoever eases the hardship of a believer, Allah will ease his hardship in this world and the next" (Muslim 2699).

Do kind acts together as a family and talk about them afterwards.

What we learnt: Small kindnesses make a big difference. Helping others is part of being a good Muslim and a good friend.

Challenge yourself · extension, ages 9–10 (optional)

Make a “kindness jar”. Add a note each time someone in your family does a kind thing.

• • •

WEEKEND PROJECT

Plan a family picnic on a budget

Imagine your family has ₦3,000 for a picnic in the park. Plan it carefully so everything fits.

What to do

1. List what you need for the picnic: food, drinks, a mat, plates.
2. Write the price of each. Ask at home or visit a shop to check.
3. Add up the prices. Is it more or less than ₦3,000?
4. If it is more, decide what to remove. If it is less, what will you add?
5. Write the plan, then share it with the family.

Item	Price (₦)
Total	
Money left	

THE LITTLE RESEARCHER

Where does our water come from?

Water is something we use every day. Find out where yours comes from, and how much your family uses.

> وَجَعَلْنَا مِنَ ٱلْمَآءِ كُلَّ شَيْءٍ حَيٍّ
>
> **And We made from water every living thing.**
>
> The Qur'an, al-Anbiyā' 21:30

1. Ask: where does the water in our house come from? (A tap, a borehole, a well, a tanker?)
2. Keep a water diary for one day: tick each time you use water.
3. Think of two ways your family could save water.
4. Draw the journey of water from its source to your cup.

I used water to...	Times today
Drink	
Wash hands	
Cook	
Bathe	
Clean	
Water plants	

The journey of the water to my cup

REFLECTION JOURNAL

Looking back at Part 7

Something new I learnt

Something I found interesting

A question I still have

Something I want to investigate

Something I am grateful to Allah for

Draw your favourite moment from this part

PART 8

Signs of Allah

In this part you will explore

1. Looking at the sky
2. Our amazing bodies
3. Seeds and trees
4. Water and rain
5. Animals as Allah's creatures
6. Gratitude
7. Good character
8. Allah's Beautiful Names and duʿāʾ

BIG QUESTION

What did Allah create today that made you smile?

Activities 8.1 to 8.9 · talk about the big question together before you begin

Signs of Allah

The Qur'an invites us again and again to look, think and be grateful. Everything we explored in this book, the plants, animals, water, sky and our own bodies, is a **sign (āyah)** that points to Allah.

In this part you will look at the sky, your amazing body, seeds and trees, water, animals, say thank you, practise good character, learn some of Allah's Beautiful Names, and make your own duʿāʾ list.

Question of the Day

Pick one at breakfast, in the car or at bedtime. There are no wrong answers. Ask "Why do you think so?"

- What is the most amazing thing Allah has made?
- Why do you think Allah made so many different colours?
- What are you most grateful for today?
- How does looking at the stars make you feel?
- How can we take care of the earth that Allah gave us?
- What is one thing you would like to ask Allah for?

Activity
8.1

Look Up!

Ages 5–8 ⏱️ About 25 minutes, day or night

Learning objective: Observe the sky and think about what we see.

What you need: A safe place outdoors, a notebook, a pencil.

إِنَّ فِي خَلْقِ ٱلسَّمَٰوَٰتِ وَٱلْأَرْضِ وَٱخْتِلَٰفِ ٱلَّيْلِ وَٱلنَّهَارِ لَءَايَٰتٍ لِّأُو۟لِى ٱلْأَلْبَٰبِ

Indeed, in the creation of the heavens and the earth, and the alternation of the night and the day, are signs for people of understanding.

The Qur'an, Āl ʿImrān 3:190

▶️ Let's begin

1. With a grown-up, go outside in the day and look at the sky. Never look directly at the sun.
2. Look at the clouds. What shapes do you see? How do they move?
3. In the evening, look again. What do you see: the moon, stars, planets, aeroplanes?
4. Draw what you see in your two skies.

? Think about it

- How is the sky different in the day and at night?
- What do you think is up there that we cannot see?
- How does it feel to look at the sky?

✎ Try it yourself

Draw the sky in the day and the sky at night.

The sky by day

The sky by night

★ Tell me what you discovered

Say "SubḥānAllāh" (Glory be to Allah) and tell your family one amazing thing about the sky.

Parent's corner

Never look at the sun directly. Make time for a few quiet minutes under the stars, away from screens.

Ask: “Who made this? What does it tell us about Allah?”

What we learnt: The sky, sun, moon and stars are signs of Allah’s power and care. Looking and thinking is a kind of worship.

Challenge yourself · extension, ages 9–10 (optional)

Watch the moon for a week and draw its shape each night. What do you notice?

• • •

Activity 8.2

My Amazing Body

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Think about the five senses and how Allah made our bodies.

What you need: A blindfold (or closed eyes), a few objects: a lemon, a flower, a bell, a spoon, a piece of cloth.

وَجَعَلَ لَكُمُ ٱلسَّمْعَ وَٱلْأَبْصَٰرَ وَٱلْأَفْـِٔدَةَ لَعَلَّكُمْ تَشْكُرُونَ

And He gave you hearing, sight and hearts, so that you might be grateful.

The Qur’an, al-Naḥl 16:78

▶️ Let's begin

1. Look at the five senses in the picture.
2. Close your eyes. Your grown-up gives you objects to smell, touch and listen to. Can you guess what each is?
3. Name one thing for each sense that you enjoy.
4. Which sense would you miss most?

? Think about it

- What can your eyes do that your hands cannot?

- How do your senses keep you safe?
- Why did Allah give us these gifts?

✎ Try it yourself

Fill in the senses table.

Sense	A thing I enjoy
See	
Hear	
Smell	
Taste	
Touch	

★ Tell me what you discovered

Say “Alhamdulillah” (praise be to Allah) for each sense, and thank Allah for your body.

Parent's corner

Be sensitive to children who may have a disability or know someone who does. Talk about the senses as gifts, not as something others “lack”.

Ask: “How could we help someone who cannot see or hear?”

What we learnt: We have five senses: sight, hearing, smell, taste and touch. They are gifts from Allah to help us learn and be safe.

Challenge yourself · extension, ages 9–10 (optional)

Spend ten minutes using only one sense, such as listening with your eyes shut. What did you notice?

Activity
8.3

Seeds and Trees

Ages 5–8 ⏱️ 10 minutes to start, then 5 minutes a day

Learning objective: Grow a seed again and think about how life comes from it.

What you need: A few seeds (orange or pumpkin seeds, or beans), a small pot or cup, soil, water.

إِنَّ ٱللَّهَ فَالِقُ ٱلْحَبِّ وَٱلنَّوَىٰ

Indeed, Allah is the One who splits the seed and the date-stone.

The Qur'an, al-Anʿām 6:95

▶️ Let's begin

1. Plant two or three seeds in damp soil, about a finger deep.
2. Put the pot in a sunny place and water it a little each day.
3. Look at it every day. Draw what you see after a week and after two weeks.
4. Wait patiently. Some seeds take longer than others!

? Think about it

- What do you think is inside the seed?
- How is a seed like a promise?
- Why is patience important when growing things?

✎ Try it yourself

Draw your seed after one week and two weeks.

After 1 week

After 2 weeks

★ Tell me what you discovered

Say "SubḥānAllāh" and tell your family how an enormous tree can come from a tiny seed.

Parent's corner

If a seed does not grow, treat it as a question: "What could be the reason?"

Plant a seed with your child on a special day, and watch it year after year.

What we learnt: Allah makes plants grow from tiny seeds. We can help by watering them and being patient.

Challenge yourself · extension, ages 9–10 (optional)

Plant the same seed in two places (sun and shade). Compare how they grow.

• • •

Activity
8.4

The Gift of Water

Ages 5–8 ⏱ About 25 minutes

Learning objective: Understand why water matters and how it travels.

What you need: A clear glass, a small plate, a plastic bag and tape or a rubber band, warm water.

وَجَعَلْنَا مِنَ ٱلْمَآءِ كُلَّ شَيْءٍ حَيٍّ

And We made from water every living thing.

The Qur'an, al-Anbiyā' 21:30

▶ Let's begin

1. Pour warm water into the glass. Cover the top with a plate or a plastic bag.
2. Put the glass in a sunny place for an hour.
3. Look at the cover. What do you see? (Tiny drops form: this is like a mini rain cycle.)
4. Talk about where rain comes from: water rises, forms clouds and falls again.

? Think about it

- What does your body use water for?
- What would happen to plants, animals and people without rain?
- How do you think the water on our plate is like rain?

✎ Try it yourself

Draw the journey of water: sea → cloud → rain → river.

★ Tell me what you discovered

Say "Alhamdulillah" and tell your family three things you use water for each day.

The water cycle

Parent's corner

Safe water is a gift many people lack. A short talk about why we avoid wasting it fits naturally here.

Make a small dua for people who need clean water.

What we learnt: Water travels in a cycle: it rises, becomes clouds and falls as rain. All living things need water.

Challenge yourself · extension, ages 9–10 (optional)

Find out how many glasses of water a person should drink each day. Keep track for a day.

• • •

Activity
8.5

Creatures Like Us

Ages 5–8 ⏱️ About 25 minutes

Learning objective: Learn that all animals are Allah's creatures and deserve kindness.

What you need: A notebook, a pencil, a quiet outdoor spot.

وَمَا مِن دَآبَّةٍ فِي ٱلْأَرْضِ وَلَا طَٰٓئِرٍ يَطِيرُ بِجَنَاحَيْهِ إِلَّآ أُمَمٌ أَمْثَالُكُم

There is no creature on the earth, nor a bird flying with its wings, but they are communities like you.

The Qur'an, al-An'ām 6:38

▶️ Let's begin

1. Choose an animal you can watch: a bird, a lizard, an ant or a cat.
2. Observe it for five minutes. What does it do to find food, stay safe, and care for its babies?
3. Think: how is it like us? How is it different?
4. Draw it and write one sentence about how it lives.

? Think about it

- How do animals look after their babies?
- What do you think animals need from us?
- How can we be kind to animals?

✎ Try it yourself

Fill in the animal card.

My animal	
How it finds food	
How it stays safe	
How it is like us	
How I can be kind to it	

★ Tell me what you discovered

Tell your family one thing about the animal that surprised you.

Parent's corner

The Prophet ﷺ taught kindness to animals, and told of a man forgiven for giving water to a thirsty dog (al-Bukhārī 173, Muslim 2244).

Never let your child chase, tease or touch unfamiliar animals.

What we learnt: Animals are Allah's creatures, and Islam teaches us to be kind and gentle with them.

Challenge yourself · extension, ages 9–10 (optional)

Put out a shallow dish of water for the birds. Watch who comes.

Activity
8.6

Thank You, Allah

Ages 5–8 ⏱️ About 20 minutes, then every day for a week

Learning objective: Notice good things and say thank you.

What you need: A notebook, a pencil.

لَئِن شَكَرْتُمْ لَأَزِيدَنَّكُمْ

If you are grateful, I will surely give you more.

The Qur'an, Ibrāhīm 14:7

▶️ Let's begin

1. Think of three good things that happened today.
2. Write or draw them in your gratitude journal.
3. Say "Alhamdulillah" for each one.
4. Do this every day for a week. At the end, read them aloud.

? Think about it

- What small things did you notice that you usually miss?
- How do you feel when you say thank you?
- Who else helped to give you these good things?

✎ Try it yourself

Fill in your gratitude diary.

Day	Three things I am grateful for
Mon	
Tue	
Wed	
Thu	
Fri	
Sat	
Sun	

★ Tell me what you discovered

Choose one person to thank this week, and thank them in a special way.

Parent's corner

Say your own thanks aloud at dinner. Children learn gratitude by hearing it.

Connect: “We thank Allah and also the people who help us.”

What we learnt: Gratitude means noticing good things and saying thank you to Allah and to people.

Challenge yourself · extension, ages 9–10 (optional)

Write a thank-you letter to someone who has helped you.

• • •

Activity
8.7

Good Character

Ages 5–8 ⏱ About 25 minutes

Learning objective: Learn about honesty, kindness and patience, and practise them.

What you need: A grown-up, a pencil, coloured pencils.

▶ Let's begin

1. Talk about three good qualities: **honesty** (telling the truth), **kindness** (being gentle and caring), and **patience** (waiting calmly).
2. For each, think of a time you showed it, or a time you could have.
3. Act out a small story for each with your family.
4. Choose one quality to practise this week.

? Think about it

- When is it hard to be honest? Why is it still best?
- What does patience look like when you are waiting?
- Who do you know who has very good character?

✎ Try it yourself

Fill in the character chart.

Quality	A time I showed it	How I can practise it
Honesty		
Kindness		
Patience		

★ Tell me what you discovered

Tell your family which quality you will practise this week.

Parent's corner

The Prophet ﷺ said: “The best of you are those with the best character” (al-Bukhārī 3559, Muslim 2321).

Notice and name good character in your child: “That was honest of you.”

What we learnt: Good character means honesty, kindness and patience. We practise it every day.

Challenge yourself · extension, ages 9–10 (optional)

Keep a “character diary” for a week. Each night, write one time you showed good character.

• • •

Activity 8.8

The Beautiful Names

Ages 5–8 ⏱ About 25 minutes

Learning objective: Learn some of Allah’s Beautiful Names and what they mean.

What you need: A pencil and coloured pencils.

▶ Let's begin

1. Allah has beautiful names. Let us learn four:
2. **Ar-Raḥmān:** The Most Merciful.
3. **Al-Khāliq:** The Creator.
4. **As-Samīʿ:** The All-Hearing. **Al-Baṣīr:** The All-Seeing.
5. Think: which names fit what you saw in this book?

? Think about it

- Which name do you like best? Why?
- How do we see mercy in the world around us?
- What do these names tell us about Allah?

✎ Try it yourself

Match a name with something you saw.

Name	Something that reminds me of it
Ar-Raḥmān (the Most Merciful)	
Al-Khāliq (the Creator)	
As-Samīʿ (the All-Hearing)	
Al-Baṣīr (the All-Seeing)	

★ Tell me what you discovered

Draw a decorated card with your favourite name. Tell your family what it means.

My favourite name of Allah

Parent's corner

Learn the names slowly, over weeks, with the meanings. A few well understood are better than many memorised.

The Qur'an says: "To Allah belong the Most Beautiful Names, so call on Him by them" (al-Aʿrāf 7:180).

What we learnt: Allah has Beautiful Names that tell us about Him: His mercy, power, and care for us.

Challenge yourself · extension, ages 9–10 (optional)

Learn two more names and their meanings from your parent or teacher.

Activity
8.9

My Duʿāʾ List

Ages 5–8 ⏱ About 25 minutes

Learning objective: Make a list of things to thank Allah for and ask Him for.

What you need: A pencil, coloured pencils, a quiet moment.

وَقُل رَّبِّ زِدْنِي عِلْمًا

And say: "My Lord, increase me in knowledge."

The Qur'an, Ṭā Hā 20:114

▶ Let's begin

1. Duʿāʾ is talking to Allah. We can use our own words.
2. Fill in the three columns: things to **thank** Allah for, things to **ask** for, and **people** to make duʿāʾ for.
3. Say your duʿāʾ quietly, after your prayer or before you sleep.
4. Begin by praising Allah, and end by sending blessings on the Prophet ﷺ.

? Think about it

- How do you feel when you make duʿāʾ?
- What is the best time to make duʿāʾ?
- Who needs your duʿāʾ today?

✎ Try it yourself

Write your duʿāʾ list.

I thank Allah for...	I ask Allah for...	I make duʿāʾ for...

★ Tell me what you discovered

Share one thing from your list with your family, and ask them to say "Āmīn".

Parent's corner

Let your child speak freely to Allah, in their own words, in any language. Say “Āmīn” warmly.

Teach a few short duʿāʾ, such as “Rabbi zidnī ʿilmā” (My Lord, increase me in knowledge).

What we learnt: Duʿāʾ is asking and thanking Allah. He hears us always.

Challenge yourself · extension, ages 9–10 (optional)

Learn a new duʿāʾ from the Qur’an or the Sunnah each week.

• • •

READING CORNER

The Date Palm

Read this passage together, then answer the questions.

The date palm is a tall tree with a straight trunk and long feathery leaves. It grows in hot, dry places and gives us sweet dates.

The Prophet ﷺ once asked his companions about a tree that is like a Muslim: its leaves do not fall, and it gives fruit all the time. They thought of many trees. Then he told them it was the date palm (al-Bukhārī 61, Muslim 2811).

Every part of the palm is useful. Its fruit feeds us, its leaves make mats and baskets, and its trunk gives shade and wood. A good person is like this: they give good to others, all the time.

Answer these questions

1 What is a date palm?

2 Name two things we can make from the date palm.

3 How is a good Muslim like a date palm?

4 What does Maryam’s story tell us about dates? (See Maryam 19:25.)

5 Which part did you like best? Why?

وَهُزِّيٓ إِلَيْكِ بِجِذْعِ ٱلنَّخْلَةِ تُسَٰقِطْ عَلَيْكِ رُطَبًا جَنِيًّا

And shake the trunk of the palm tree towards you; it will drop fresh ripe dates upon you.

The Qur’an, Maryam 19:25

REFLECTION JOURNAL

Looking back at Part 8

Something new I learnt

Something I found interesting

A question I still have

Something I want to investigate

Something I am grateful to Allah for

Draw your favourite moment from this part

WEEK 12 PROJECT

My Big Question Book

You have asked many questions in this book. Now make a little book of your very own, with your best questions and what you found out.

What you need

Four sheets of paper folded in half (that makes a book of 16 pages), a stapler or thread, pencils and crayons.

Let's begin

1. Make the cover. Write **"My Big Question Book"** and your name. Decorate it.
2. On each page, write one big question you asked in this book, or a new one.
3. Under each question, write or draw what you found out. Add "I still wonder..." if you are not sure.
4. Add a page of thanks to Allah for the things you learnt.
5. Read your book to your family. Invite them to ask questions!

My five best questions

My question	What I found out

PROGRESS JOURNAL

How am I growing?

Fill this in at **weeks 4, 8 and 12**. Colour one box for each skill: **B** (Beginning), **D** (Developing) or **C** (Confident). Do not use it to compare with other children. Compare your child only with themselves.

Skill	Week 4	Week 8	Week 12
1. Curiosity and observation	B D C	B D C	B D C
2. Reasoning and problem-solving	B D C	B D C	B D C
3. Reading and knowledge	B D C	B D C	B D C
4. Speaking and listening	B D C	B D C	B D C
5. Creativity	B D C	B D C	B D C
6. Number sense	B D C	B D C	B D C
7. Independence and teamwork	B D C	B D C	B D C
8. Reflection and gratitude	B D C	B D C	B D C

Looking back

What has your child enjoyed most?

What are they better at now than before?

What would you like to try next?

Notes for the parent or teacher

A message from me, to myself

ACTIVITY RECORD

Tick each activity when you finish it

Part 1: The Curious Observer	
☐ 1.1 Super Spotter	☐ 1.5 Sink or Float?
☐ 1.2 Why, How and What If?	☐ 1.6 What Makes Ice Melt?
☐ 1.3 A Seed's Big Journey	☐ 1.7 My Weather Notebook
☐ 1.4 Animal Detectives	☐ 1.8 Explorer Walk

Part 2: The Little Thinker	
☐ 2.1 Pattern Detectives	☐ 2.5 Tower Challenge
☐ 2.2 Sort It Out	☐ 2.6 Because... So...
☐ 2.3 Riddle Time	☐ 2.7 Choices and Consequences
☐ 2.4 Same and Different	☐ 2.8 Many Ways to Say It

☐ 8.5 Creatures Like Us	

FOR PARENTS AND TEACHERS

Answers and notes

Most activities have no “right” answer. These notes cover the ones that do.

Activity	Answer or note
1.5 Sink or Float?	Typical results: a spoon, a stone, a coin, a bottle cap and a pencil: spoon, stone, coin and cap sink; the pencil floats; a leaf floats; foil ball sinks and foil boat floats. Always follow what your child actually sees.
2.1 Pattern Detectives	Row A: red circle. Row B: yellow circle. Row C: red square. Row D: five dots.
2.3 Riddles	1: a clock. 2: a comb. 3: a towel. 4: a bottle. Logic puzzle: Aisha has green, Bilal has blue, Zainab has red.
2.4 Spot the Difference	Six differences: the cloud is missing in Picture 2; the door is blue instead of brown; the right-hand window is missing; one apple is missing from the tree; one flower is missing; a bird is added in the sky.
3.6 Animals	Mammals: goat, whale, bat. Birds: hen. Reptiles: lizard. Fish: catfish. Insects: ant.
6.2 Counting in Jumps	Twos: 6, 12, 16. Fives: 15, 25, 35. Tens: 20, 50, 70.
6.3 Egg-Box Maths	2 rows of 3 = 6; 3 rows of 4 = 12; 2 rows of 5 = 10.
6.6 Clock Time	A: 3 o’clock. B: 7 o’clock. C: half past 10. D: half past 12.
6.7 Market Day	Pencil: ₦50 change. Biscuit: ₦20 change. Orange: ₦20 change.
6.8 Fair Shares	12 shared between 2, 3 and 4 is 6, 4 and 3 each. 10 shared between 3 is 3 each with 1 left.

Scientific honesty

If your child’s result is different from what we expected, accept it. Ask “Why do you think it happened?” A surprising result is the best science lesson.

A certificate for the whole family

LITTLE MINDS, BIG QUESTIONS

Certificate of Curiosity

This is to celebrate that

_____

has asked wonderful questions, explored, thought, created, helped others, and thanked Allah for His signs.

“My Lord, increase me in knowledge.”
